

Clothes

Clothes keep us warm as fabric is an insulator. They also trap air near our skin and air is also a good insulator.

Steel

Steel contains iron, which is a metal and a good conductor of heat and electricity.

Wood

Wooden spoons can stir hot food without passing the heat from one end of the spoon to the other, so you don't burn your hand!

Staying warm

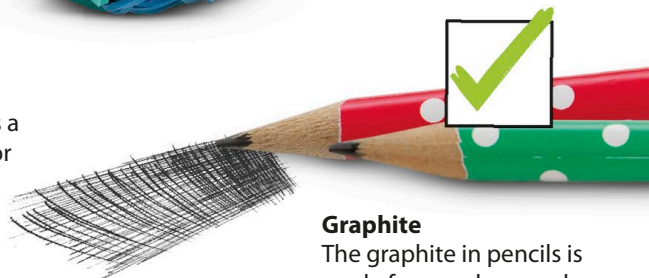

A polar bear has insulating fur and a thick layer of fat to help keep it warm. The average winter temperature in the Arctic, where polar bears live, is -29°C (-20°F).

Polar bears live in the freezing Arctic.

Rubber

Rubber is an insulator. It is used in electrical equipment, along with plastics, to stop electricity going where it shouldn't.

Graphite

The graphite in pencils is made from carbon, and is a good conductor.
