

Sparks of genius

Scientists have made brilliant discoveries about energy that have led to ways of making electricity, seeing deeper into space, and curing diseases. These energy pioneers helped us to understand how and why the Universe works the way it does.

ISAAC NEWTON

-  **Discovery:** White light is made from all the colours of the rainbow.
-  **Years:** 1643–1727
-  **Work:** Isaac used a prism to split white light into the colours of the rainbow. Using his knowledge of light he also built a new telescope that showed the stars and planets more clearly.

BENJAMIN FRANKLIN

-  **Discovery:** Proved that lightning is electricity.
-  **Years:** 1706–1790
-  **Work:** Benjamin flew a kite into a storm. Electricity flowed down the string and made sparks – proving that electricity moves from one place to another and that lightning is electricity.

CHRISTIAN DOPPLER

-  **Discovery:** How sound and light change when their source is moving.
-  **Years:** 1803–1853
-  **Work:** As a police car moves towards you the noise of the siren sounds higher, and as it moves away it sounds lower. This is called the Doppler effect. It also affects the colour of moving light.
