

A man with long brown hair and a beard is shown in profile, facing left. He is wearing a long, dark brown fur tunic with a light-colored belt and matching fur trousers. He is holding a long wooden spear with a dark, pointed spearhead. The background is white.

This spearhead is made from a rock called flint. Other spearheads were made from bone, antler, or ivory.

Winter hunter

In the cold winter months, Stone Age people wore animal skins, such as this tunic made from red deer skin. Skins kept them warm while out hunting.

This backpack is made from deer skin. The wooden frame is similar to metal frames found in modern rucksacks.

WOW!

Some clothes were woven from the stems of **stinging nettles**!

The dull brown color of the fur made great camouflage in woodland.

The belt has a pouch at the front for carrying stone tools.

Spears were made from hazel or ash wood.

Shoes made from deer skin were sometimes worn to keep warm in the cold winter.

Needle and thread

Toward the end of the Stone Age, the needle and thread were invented to help make clothes. Once people could wear fitted clothing, it was easier for them to keep warm and to live in harsher climates.

Needles were made from bone and threaded with plant fiber.
