

Without these people's help, the hole in the ice would soon freeze over, closing the whales' access to air.

The tag beams data to a satellite when the beluga surfaces. Tag attachment does not harm the whale.

How can we help them?

There is a lot that we don't know about whales, including where they go and how many there are. Satellite tags are useful for helping to track a whale's movements. They fall off after a few weeks.
