

8.8 cm PaK 43/3 gun

Interleaved road wheels

◁ Jagdpanther

Date	1944	Country	Germany
Weight	51.5 tons (46.7 tonnes)		
Engine	Maybach HL230P30 gasoline, 700 hp		
Main armament	8.8 cm PaK 43/3 L/71 gun		

The Jagdpanther was based on the Panther (see pp.72-73) chassis, and was well armored, mobile, and possessed heavy firepower. It was a capable weapon, especially when used in ambush or defensive positions. However, only 392 were built and they were plagued by poor maintenance and crew training. The Jagdpanther was thus too scarce to affect the course of the war.

12.8 cm PaK 44 gun

34 ft 11 in (10.65 m) long, including gun

Torsion bar suspension

▽ Jagdpanzer 38(t) Hetzer

Date	1944	Country	Germany
Weight	17.6 tons (16 tonnes)		
Engine	Praga AC/2 gasoline, 150 hp		
Main armament	7.5 cm PaK 39 L/48 gun		

Using a hull based on the Panzer 38(t) (see pp.66-67), the Hetzer was smaller, lighter, and cheaper than other late-war Jagdpanzers. Due to its small size, it could easily hide and ambush enemy forces on the battlefield. However, the Hetzer was not popular with its crews, who found it extremely cramped, with a poorly laid-out interior. Around 2,584 were built.

△ Jagdtiger

Date	1944	Country	Germany
Weight	78.4 tons (71.1 tonnes)		
Engine	Maybach HL230P30 gasoline, 700 hp		
Main armament	12.8 cm PaK 44 L/55 gun		

The Jagdtiger was the heaviest armored vehicle of World War II. It used the same suspension as the Tiger II (see pp.72-73), but had a longer hull. Its gun could defeat any Allied tank at long range. Many Jagdtigers were lost due to breakdowns, some being destroyed by their crews.

7.5 cm PaK 39 gun

Sprocket wheel at front

38 cm mortar

△ Sturmpanzer IV

Date	1944	Country	Germany
Weight	72.8 tons (66 tonnes)		
Engine	Maybach HL230P45 gasoline, 700 hp		
Main armament	38 cm Stu M RW61 L/5.4 mortar		

An assault gun based on the Tiger chassis, the Sturmpanzer IV was heavily armored in order to survive close-range street fighting. Its powerful rocket-assisted mortar gave it devastating firepower, but the round's huge size meant that only 14 could be carried. Only 18 Sturmpanzer IVs were ever built.
