

3 in main gun

Gun points to rear

Serial number

◁ Valentine Archer

Date 1943 **Country** UK
Weight 17.9 tons (16.3 tonnes)
Engine General Motors 6-71M diesel, 192 hp
Main armament QF 17-pounder gun

In 1943, the Valentine was the only available tank chassis that could be fitted with the powerful 17-pounder for use as a tank destroyer. However, the gun's size meant that the only way it could be made to fit was by pointing it to the rear. Despite this, Archers were reliable and effective.

▷ M18 Hellcat

Date 1943 **Country** USA
Weight 19.6 tons (17.8 tonnes)
Engine Wright Continental R-975 gasoline, 400 hp
Main armament 76 mm M1A2 L/52 gun

One of the fastest ever armored vehicles, the M18 was well suited to US tank destroyer doctrine. However, its speed and mobility—enhanced by very thin armor and torsion bar suspension—proved to be of limited value, and its firepower was inadequate against the heaviest German tanks.

◁ ISU-152

Date 1944 **Country** Soviet Union
Weight 52.1 tons (47.2 tonnes)
Engine Kharkiv Model V-2IS diesel, 520 hp
Main armament 152 mm ML-20S L/29 gun-howitzer

The chassis of Soviet heavy tanks formed the basis for a series of heavy assault guns. The SU-152 was built on the KV-1S, while the very similar ISU-152 used the later IS chassis. A shortage of 152 mm barrels led to another variation—the 122 mm-armed ISU-122. These vehicles were held in separate units to support attacks and breakthroughs. Their devastating firepower made them popular in urban fighting.

▷ M36

Date 1944 **Country** USA
Weight 31.9 tons (29 tonnes)
Engine Ford GAA V8 gasoline, 500 hp
Main armament 90 mm M3 L/53 gun

A development of the M10A1 with heavier firepower but similar armor and mobility, the M36 proved its worth in combat. It could knock out the heaviest German tanks at long range. High demand led to versions based on the diesel M10 and the unmodified M4A3 hull. Around 2,300 were built in total.

◁ SU-100

Date 1944 **Country** Soviet Union
Weight 34.7 tons (31.5 tonnes)
Engine Kharkiv Model V-2-34 diesel, 500 hp
Main armament 100 mm D-10S L/53.5 gun

The design of SU-85 was upgraded to become the SU-100. Both vehicles provided long-range antitank support to formations, and were also held in reserve to defend against the heaviest German tanks. Around 1,200 were built during the war. Production and upgrades continued afterward, and the vehicle remained in service around the world for decades.
