

▷ **Type 88C**

Date 1981 **Country** China
Weight 45.2 tons (41 tonnes)
Engine VR36 V12 diesel, 790 hp
Main armament 125 mm smoothbore gun

During the Cold War, two generations of Chinese tanks shared the basic T-54 design. This began to change in the late 1980s. The culmination of a series of prototypes and export models, the Type 88C had a new road-wheel arrangement and a new turret fitted with an autoloader.

◁ **Type 69**

Date 1983 **Country** China
Weight 40.4 tons (36.7 tonnes)
Engine 12150L-7BW V12 diesel, 580 hp
Main armament 100 mm rifled gun

A heavily upgraded Type 59, the Type 69 was developed by Chinese companies without Soviet support. This later version, the Type 69-II, had a laser range finder mounted over the barrel and an infrared searchlight next to the gun. It was not widely used by the Chinese, but was a significant export success.

▷ **T-55AD**

Date 1989 **Country** Soviet Union
Weight 39.6 tons (36 tonnes)
Engine V-55 V12 diesel, 580 hp
Main armament 100 mm D-10T2S L/53.5 rifled gun

Popularly known as Enigma, this Iraqi T-55 has extra armor attached to its turret, side skirts, and glacis plate. It contains layers of steel, rubber, and aluminum to defeat High Explosive Anti Tank (HEAT) warheads. This is an example of the kind of upgrades applied by many countries to keep older tanks viable on the battlefield. A disadvantage is the extra weight, which can affect the tank's mobility.
