

Smoke grenade launchers

▽ **Namer**

Date 2008 **Country** Israel
Weight 68.3 tons (62 tonnes)
Engine Continental AVDS-1790 diesel, 1,200 hp
Main armament .50 Browning M2 machine gun

Israeli experience of urban warfare demonstrated the vulnerability of the M113 APC, so several replacements based on existing chassis were developed. The Namer uses the highly mobile Merkava 4 chassis, equipped with even heavier armor. To enhance protection against Anti-Tank Guided Missiles (ATGMs), it is now equipped with the Trophy APS (see pp.221).

Remote controlled machine gun

Merkava 4 chassis

△ **BvS 10 Viking**

Date 2004 **Country** Sweden
Weight 12.4 tons (11.3 tonnes)
Engine Cummins ISBe250 30 diesel, 275 hp
Main armament 7.62 mm L7 machine gun

Developed for the British Royal Marines, the Viking is a lightly armored vehicle developed from the smaller, unarmored Bv206. It runs on rubber tracks and is steered by hydraulic rams between the two cabs, giving it excellent mobility, even over sand and snow. Operations in Afghanistan saw the vehicle equipped with extra armor.

Unmanned turret with 30 mm cannon

◁ **Schützenpanzer Puma**

Date 2010 **Country** Germany
Weight 47.4 tons (43 tonnes)
Engine MTU MT 892 Ka-501 diesel, 1,090 hp
Main armament 30 mm MK30-2/ABM cannon

The replacement for the venerable Marder, the Puma uses an unmanned turret, keeping all three crew and six infantry together in the hull. Modular armor can be added or removed to match a threat level, or to reduce its weight to 34.2 tons (31 tonnes) for air transportation.

Smoke grenade launchers

▽ **Ajax**

Date 2016 **Country** UK
Weight 41.9 tons (38 tonnes)
Engine MTU 199 diesel, 800 hp
Main armament 40 mm CTAI CT40 cannon

An Intelligence, Surveillance, Target Acquisition, and Reconnaissance (ISTAR) vehicle developed for the British Army, the Ajax adopts its basic design from the ASCOD. The vehicle has a digital electronic architecture that enables it to share information with friendly forces. A number of variants are planned, including specialized personnel carrier, engineer reconnaissance, repair, recovery, and command.

Camouflage covering

△ **BMD-4M Airborne Assault Vehicle**

Date 2014 **Country** Russia
Weight 15.5 tons (14 tonnes)
Engine UTD-29 multifuel, 500 hp
Main armament 1 x 100 mm 2A70 smoothbore gun, 1 x 30 mm 2A72 cannon

Based on the BMD-3 hull, the original BMD-4 entered service with the Russian Airborne Troops (VDV) in 2004, although just 60 were delivered. The improved BMD-4M uses the engine and other automotive components from the BMP-3 to ease costs, logistics, and maintenance. An APC variant, the BMD-MDM, has also been introduced.
