► Medium Tank M2A1

Date 1939 **Country** USA
Weight 25.8 tons (23.4 tonnes)
Engine Wright Continental R-975 gasoline, 400 hp
Main armament 37 mm M3 L/56.6 gun

The M2 was the first US medium tank to enter production. Intended for infantry support, the tank was also armed with six .30 machine guns arranged to allow 360-degree fire. Although the M2 was clearly obsolete by 1940, its VVSS (see pp.46-47) and R-975 engine were not. Both were reused on the M3 and M4.

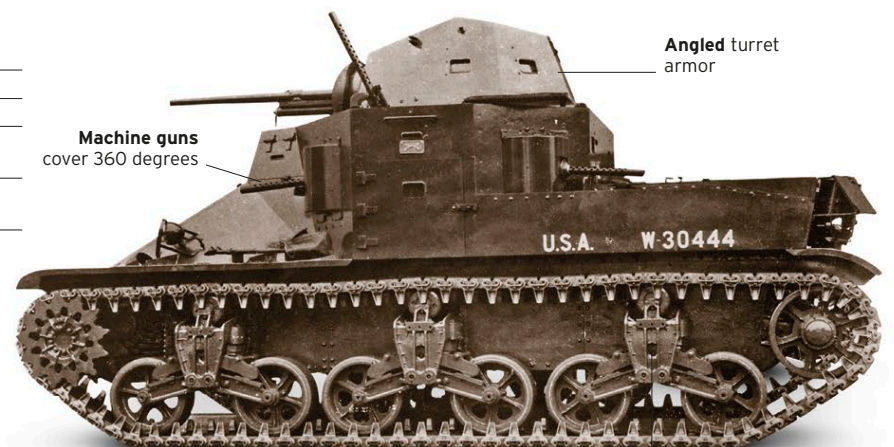

Separate fighting compartment in each turret

△ T-35

Date 1936 **Country** Soviet Union
Weight 50.4 tons (45.7 tonnes)
Engine Mikulin M17T gasoline, 650 hp
Main armament 76.2 mm Model 1927/32 gun

A heavy tank, the T-35 shared many components with the T-28 in an effort to ease production, but ultimately just 61 were built. It had five turrets, one with the 76.2 mm gun, two with 45 mm 20K guns, and two with DT machine guns. Most were lost during the German invasion.

◁ Strv m/40L

Date 1940 **Country** Sweden
Weight 10.1 tons (9.1 tonnes)
Engine Scania-Vabis 1664 gasoline, 142 hp
Main armament 37 mm Bofors m/38 gun

Based on the Landsverk L-60, a total of 100 Strv m/40Ls were built. Interwar Swedish tanks were very capable, but as a neutral nation Sweden was left behind by rapid tank development during World War II. Twenty tanks were sold to the Dominican Republic in 1956. These were the only m/40Ls to see combat—against the US in 1965.
