

▷ **M4A3E8 (76) (Sherman)**

Date	1944	Country	USA
Weight	35.6 tons (32.3 tonnes)		
Engine	Ford GAA V8 gasoline, 500hp		
Main armament	76 mm M1A2 L/52 gun		

A late model of M4A3, this “Easy 8” Sherman was armed with the more powerful 76 mm gun in the new T23 turret. The frontal armor was sloped at 47 degrees, giving improved protection. The new Horizontal Volute Suspension System (HVSS) and wider tracks improved the tank’s mobility. This example appeared in the 2014 movie *Fury*.

◁ **M24 (Chaffee)**

Date	1944	Country	USA
Weight	20.2 tons (18.3 tonnes)		
Engine	2 x Cadillac Type 44T24 gasoline, 110 hp each		
Main armament	75 mm M6 L/39 gun		

The M24 was designed to have superior mobility and firepower compared to the Stuart. However, due to delays in production, it did not fully replace the Stuart before the end of the war. It was the first US tank to use torsion bars instead of the Vertical Volute Suspension System.

△ **M26 (Pershing)**

Date	1945	Country	USA
Weight	45.9 tons (41.7 tonnes)		
Engine	Ford GAF V8 gasoline, 500hp		
Main armament	90 mm M3 L/53		

After a prolonged development process, production of the M26 was further delayed, and only 20 reached Europe to see combat. The powerful 90 mm gun was capable against the Panther and the Tiger. Like the Chaffee, it had torsion bar suspension. As it used the same engine as the M4A3, but was heavier, it proved underpowered.
