

THREE-QUARTER VIEW

Rubber-blocked track

Additional armor

Uparmored model

This Sherman M4A1 has a cast hull and additional armor welded over the hull sides to protect the ammunition stowage. In spite of crew stories, reports showed ammunition caused more "brew-ups" (fires) in Sherman tanks than the engine did, so protecting ammunition with extra armor and later "wet" ammunition stowage was vital.

HAVOC**"Havoc"**

The tank has the markings of a vehicle from H Company, 66 Armoured Regiment of the 2nd US Armored Division. Tank names in H company began, understandably, with the letter H.

USA
3038210**Tank serial number**

While tanks could change units, be rebuilt, and reassigned, meaning a change in markings, the unique serial number remained with the vehicle as a permanent reference.
