

EXTERIOR

As the war progressed, the design of the Sherman was modified with thicker armor, wider tracks, and a new, upgraded 76 mm gun. With 11 different factories building the tank around four main engine types, the variations between the models can be considerable. This tank, produced by the Lima tank works in Ohio, US in 1943, has upgraded armor and went on to see service as a training vehicle in the French army after World War II.
