

◁ Crusader III

Date 1941 **Country** UK

Weight 22.1 tons (20.1 tonnes)

Engine Nuffield Liberty Mark III V12 gasoline, 340 hp

Main armament QF 6-pounder gun

Around 5,300 Crusaders were built, and they played a major role in North Africa. The Mark I and II were lightly armored and equipped with the aging 2-pounder gun. This version, the Crusader III, had better protection and used the 6-pounder. The engine and Christie suspension made it very fast, but it proved to be unreliable in the desert.

Coiled spring suspension

▷ Churchill Mark I

Date 1941 **Country** UK

Weight 43.1 tons (39.1 tonnes)

Engine Bedford 12-cylinder gasoline, 350 hp

Main armament 1 x QF 2-pounder gun, 1 x 3 in howitzer

The Mark I was armed with a 2-pounder gun for antitank operations and a 3 in howitzer for supporting infantry with high explosive rounds. The howitzer was removed from later versions. Due to rushed production, early Churchills had many flaws, and the Mark I was only used in action at Dieppe in August 1942.

◁ Sentinel

Date 1942 **Country** Australia

Weight 31.4 tons (28.4 tonnes)

Engine 3 x Cadillac V8 41-75 gasoline, 117 hp

Main armament QF 2-pounder gun

In 1940, Britain could not spare any tanks for its allies, which led the Australians to design and build the Sentinel. Its turret and hull were large, complicated castings. More tanks became available after the US entered the war, and the 65 Sentinels produced were used only for training.

▷ Cavalier

Date 1940 **Country** UK

Weight 29.7 tons (26.9 tonnes)

Engine Nuffield Liberty gasoline, 410 hp

Main armament QF 6-pounder gun

The first of three very similar Cruiser tanks designed to replace the Crusader, the Cavalier was an interim model that used the Crusader's Liberty engine, as the Meteor engine that had been intended for these vehicles was not yet available. It was never used in battle.

◁ Centaur IV (Close Support)

Date 1942 **Country** UK

Weight 30.8 tons (27.9 tonnes)

Engine Nuffield Liberty gasoline, 395 hp

Main armament 95 mm howitzer

The second Crusader replacement, the Centaur, used the Liberty engine, but was modified so the Meteor would also fit with minimal changes. Most versions carried 6-pounder or 75 mm guns, but the only ones to see action were Close Support variants with a 95 mm howitzer, used on D-Day.
