

5) From Window Shopping at Train Stations to a Mailbox Subscription

I have been a fan since 2010. I have been reading the magazine here and there, used to read through the transparent cover in the train stations. I like it so much. (I had read it through the cover without purchasing it because couldn't really afford it as I was a student back then). Now that I can afford it and it's getting delivered to my postal address, it feels unreal. I used to feel really privileged and special when I used to get a CD in the back cover. You guys rock. keep doing the best as you hv been doing. Kudos!

6) Three Decades in IT, Powered by Digit

I've been a Digit fan since its launch in 2001. Having started a career as an IT entrepreneur in 1996, by establishing an IT centre to provide IT education, sales and services in Goa, we always waited for the magazine to hit the local stands, and many a times purchased multiple copies to award as prizes to

the students during competitions and PPT presentations. The yearly special issues were awesome. Of course, the goodies available on DVDs were AWESOME. Post demonetization, Covid and GST, business volumes were down and all IT content was available online. There was curtailment in expenses. However,

we decided to renew our ties with Digit and are happy to receive our monthly mag at our address even now. We are back in action and enjoying Digit to the fullest. This past April 29th we completed 30 years while Digit 25. Congratulations to the Digit Team!! Continue doing a great job and focus more on imparting knowledge on AI and AI tools.

7) How a 9th-Grade DVD Defined My Career

My journey started with Digit a long long time ago. Those days we had dial-up internet, so obviously my world to tech was through your work. The DVDs bundled were the closest thing I could have to up-to-date softwares. I started with Digit somewhere around 2009.

Digit changed my life when you shared Linux Mint 9 Isadora on the tech DVD. I still have that DVD with me. It introduced me to the world of Linux, and

eventually that introduction defined my whole life and my career. It is still the fondest memory. That summer I was liberated and mesmerized by the capabilities of Linux. And I was young then, in the 9th class. Thank you for being my geeky friend throughout the major part of my life! It's always nice to read your column's in the magazine, and it has always been this way since I got my first Digit mag. You guys have been a part of my long train journeys, my summer afternoons, my college days, and now my leisure time. It's been one hell of a good time with you folks. In this era of AI, I really love reading articles by humans at Digit. You guys are doing fab work! And it has been a good time seeing your growth out of print as well. You guys are like my childhood friend who helped me navigate tech!

8) Passing Down the Tech Torch: An Engineer's Journey

I had read Digit for the first time around 2010 when I was studying engineering. Actually my uncle was habituated to reading all these tech magazines regularly, hence I took one from him and read that and it looked so interesting that I was regularly reading it from that time. Softwares which we got on CD and then DVD was mesmerising at that time. Even though time moved on, Digit still stands tall.
