

own in a way that surprised me. In fact, I can't believe I'm saying this, but I actually prefer the photos taken from the X300 Ultra over the Sony.

You can check out the full comparison by watching the video at this [LINK](#).

If I had to rank camera phones right now, the Vivo X300 Ultra is easily number one for me. Then comes the Galaxy S26 Ultra, and then the iPhone 17 Pro Max. And that's not me saying the others are bad. All three are incredible. But when it comes purely to the camera, this one just edges ahead.

Now, once you get past the camera, you may expect the rest of the phone to feel secondary. It doesn't.

PERFORMANCE

Even when it comes to performance, there's nothing to complain about. The Vivo X300 Ultra gets 16GB LPDDR5X Ultra RAM, 512GB UFS 4.1 storage, and the top-of-the-line Snapdragon 8 Elite Gen 5 under the hood. What this means is that this phone is fast. Quite literally, in the way the software has been optimised, and the way animations and transitions work, everything is snappy. App opening times are quick, app switching is smooth, RAM management is top-tier, and it just feels like a flagship phone in 2026 should.

The benchmark numbers back it up too. In Antutu, the Vivo X300 Ultra scored 3,807,530. This is actually the highest Antutu score I have recorded on any Snapdragon 8 Elite Gen 5 phone I

have tested. Then, in Geekbench 6, the phone scored a solid 3,420 and 10,741 in single-core and multi-core performance, respectively. But honestly, you don't even need to look at the benchmark scores, because as I said, the phone is fast.

By the way, gaming is solid as well. There's support for 120fps in BGMI and COD: Mobile, while Genshin Impact is capped at 60fps. The gaming performance holds up, and thermals are managed nicely. However, yes, it did heat up when I used the camera rigorously, but that's expected. The important part is that it doesn't stop you from using it.

VERDICT

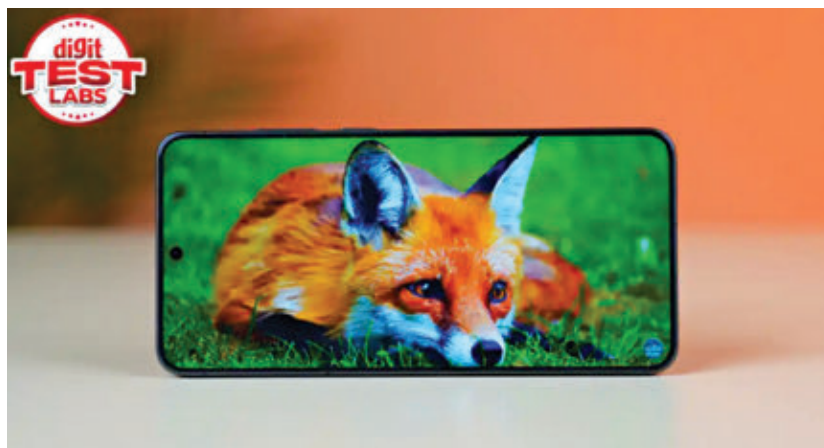

Will it be too far-fetched to say that the Vivo X300 Ultra is near-perfect? This phone is not just about having the best camera, even if it probably does. It's about how complete the package feels.

Yes, the Galaxy S26 Ultra might still be the safer recommendation for most people. But if you are someone who actually cares about what your phone can do, especially with the camera, this one is very hard to ignore. In fact, it's hard not to recommend it.

When you look at all the parameters, the Vivo X300 Ultra features a premium design, the display is excellent, performance is top-tier, the software is practical, and battery life is reliable. If you noticed, it nails every aspect of an all-rounder flagship smartphone.

For me, the X300 Ultra has set a new benchmark. I feel smartphone makers need to pay attention here. And I'm genuinely curious about the upcoming Oppo Find X9 Ultra now, because that's going to be an interesting fight.

—Aman Rashid

SPECIFICATIONS

Chipset: Qualcomm Snapdragon 8 Elite Gen 5 Mobile Platform | RAM: 16 GB LPDDR5X | Storage: 512 GB UFS 4.1 | Display: 6.82-inch 2K AMOLED | Refresh rate: 144Hz | Brightness: 1800 nits | Camera (rear): 200 MP + 200 MP + 50 MP | Camera (Front): 50 MP | Battery: 6,600 mAh | Charging: 100W | IP Rating: IPX8 and IPX9
