

67-percent Indian AC buyers want smart features, with LG most preferred brand

Agent 001 | editor@digit.in

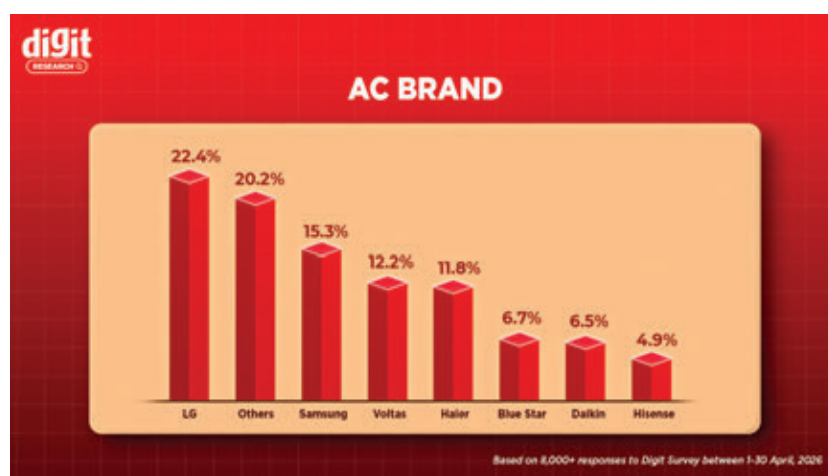

With summer hitting hard across India, it is safe to say that air conditioners are no longer a luxury but a must-have. No matter where you live, an AC is arguably the most used appliance in the household throughout summer. As demand continues to grow, we wanted to understand how Indian consumers think when looking to purchase a new AC.

And that's going to be our focus in this edition of Digit Research. Through our website, 8,000+ respondents from across India answered questions related to ACs. From brand loyalty to smart features, we found that the market is energy-conscious but is looking for smart features along with it.

LG leads the Indian AC market

When it comes to brand loyalty in the AC market, LG comes out on top, with over 22.4% of the respondents having their ACs. Even though they're not known to be the most budget-centric maker, it is clear that brand name is an important factor for those looking to purchase a new unit.

Samsung comes in third place with 15.3% of the votes, while Voltas, considered the most popular player in the market, comes in fourth with 12.2% of the votes. Haier is close behind at 11.8%, and Blue Star gets around 6.7% of votes.

AI features in AC

For those interested in the smart features, we asked a simple question: Would you want AI-powered features in your next AC? And well, the response was clear as 67% of the people said yes, suggesting that two out of three people want AI in their ACs. The combination of energy savings and rising AI interest points toward a clear product opportunity, where people want an AC that uses AI to optimise its energy efficiency.

Usage of smart features

While people are interested in getting smart features, we wanted to understand how many people actually use such features. This is because it has been noticed that smart features in appliances go unused, and our

results align with this theory. While over 32% of people suggest that they use smart features, a massive base of about 39% of people suggest that they likely never use such features; even if they do, it's not regular.

Energy efficiency

When asked about the most important factor in their next AC purchase, over 55% of respondents chose Energy Star ratings. This is definitely a sign that they are not just for show, but rather they are a purchase driver in the market. Smart features came in second, and right after that, the capacity of the AC comes in. **d**
