OpenAI wants to build the UN of AI: Good luck with that

Chris Lehane could not have had better timing than this. Hours before Trump was set to meet with Chinese leader Xi Jinping in Beijing, the VP of global affairs for OpenAI came to DC to sell a grand plan for international AI governance, with America and China working together around the same table. He proposes an international agency, something similar to the International Atomic Energy Agency, pieced together from various AI research institutions across the globe, with America's Commerce Department at its hub.

The IAEA took years of negotiation and a specific historical moment to make it politically viable. There is no cooperation between the two nations when it comes to AI similar to the one they established concerning nuclear weapons. The technology is moving too fast. And the current American administration is not exactly in a multilateralist mood. tinyurl.com/us81usd

220,000 NVIDIA GPUs and double the Claude Code limits: Anthropic's SpaceX deal explained

Despite previously attacking Anthropic, Elon Musk has signed a major compute partnership with the company through SpaceX, granting access to the Colossus 1 data centre with 220,000 NVIDIA GPUs and 300MW of capacity. Anthropic says this double Claude Code limits and increases API access for Opus models. The deal is part of Anthropic's expansion involving Amazon, Google, Microsoft, NVIDIA, and Fluidstack. tinyurl.com/pa927dcv

OpenAI brings Daybreak to rival Claude Mythos: Here is what they claim it can do

OpenAI has launched Daybreak, a cybersecurity platform combining GPT-5.5 and Codex that scans codebases, detect vulnerabilities, generate and test patches within

repos. Access comes in three tiers: general workflows, Trusted Access for Cyber for defensive tasks, and Cyber for penetration testing and red teaming. tinyurl.com/87cuhs91
