

Beyond The Controller

SEAN HYUNIL SOHN | CEO, KRAFTON India

The CEO of the company behind BGMI has a clear view of where Indian gaming sits in 2026 — and where it's headed. Sean Hyunil Sohn argues the next 25 years will see India move from being one of gaming's biggest markets to one of its most important creative hubs, exporting IP rather than just consuming it.

How has tech / gaming evolved over the past 25 years?

Over the last 25 years, gaming has evolved from a niche hobby into a mainstream entertainment and digital engagement platform. What was once primarily driven by hardware and graphics is now shaped by communities, creators, live-service experiences, esports, and increasingly, AI-led innovation. In India, the combination of smartphone adoption, affordable internet, and a young digital population has fundamentally changed how people discover, play, and engage with games.

Publications like Digit have been part of this broader technology evolution in India. As gaming became more mainstream, such platforms also helped bring greater visibility to the category and contributed to wider conversations around digital culture and emerging technology trends.

Today, gaming extends far beyond devices or entertainment. It has become a space where technology, content, creators, and

communities intersect, and that convergence will continue to shape the future of the industry.

How is tech / gaming going to transform our lives in the next 25 years?

The next 25 years of gaming will be shaped by how deeply it becomes integrated into culture, community, and digital life. Gaming is already evolving beyond entertainment into a platform for competition, creativity, social interaction, and content creation. We are seeing this through the growth of esports, creator ecosystems, live-service experiences, and increasingly community-driven engagement across platforms.

In India specifically, this creates a significant opportunity. The country has a large, digitally native population, strong technology talent, and a

rapidly growing creator ecosystem. Over time, we believe India will evolve not just as a large gaming market, but as a meaningful hub for game development, digital content, and globally relevant IP creation.

For companies like KRAFTON, the focus will increasingly be on building long-term ecosystems around gaming, through investments, developer support, esports, and local content creation. The next phase of growth will come from enabling Indian talent and creating experiences that are both locally relevant and globally scalable.

Any message to Digit on completing 25 years?

Congratulations to the Digit team on completing 25 years. Over the years, the platform has consistently documented the evolution of technology and gaming in India through reviews, testing, and industry reporting, while helping bring greater visibility to emerging categories and trends.

As gaming and technology continue to evolve, platforms like Digit will continue to play an important role in shaping conversations around innovation, consumer behaviour, and digital culture in India. Wishing the team continued success for the years ahead. 

Gaming has become a space where technology, content, creators, and communities intersect
