

A Healthier Relationship With Tech

AKIS EVANGELIDIS | Co-founder & India President, Nothing

Wow. 25 years. I was 11 years old." That's how old Akis Evangelidis says he was when Digit launched. The Nothing co-founder, now running the brand's India business, gives the most unfiltered answers in this package – part personal recollection, part forecast. His bet for the next 25 years: the app-based smartphone gives way to an agentic OS, and our relationship with our devices gets healthier.

How has tech evolved over the past 25 years?

Wow. 25 years. I was 11 years old. I don't think I had any tech product. Maybe a walkie-talkie at the time. But technology has drastically changed since then. You know, the internet era happened, the smartphone era, the first iPhone was launched and I think our whole society has drastically changed due to technology, especially due to this bad boy, the smartphone.

I feel when thinking about it, I don't know how we used to live without it. Like even Google Maps, you know, having those big paper maps. So now it has drastically changed the whole society; how we interact, how we communicate, how we work, how we consume media. It's been actually good sometimes to reflect with such questions, but everything has changed, all across the board.

And across those 25 years, shout out to Digit to be around for so long. I think they've seen the whole kind of tech revolution with smartphones and the internet. They've been able to keep reinventing themselves, staying on top of how people consume content, what content they want to be consuming, and building overall a very trusted source when it comes to tech products to inform people and hopefully help them in their buying decisions.

How is tech going to transform our lives in the next 25 years?

I mean, it's quite hard to be honest. I think at the pace where things are going now with the whole kind of AI revolution, it's quite hard to predict what the next 25 years will be.

But what I can tell is that the overall smartphone experience, how we're

interacting with our smartphones, will drastically change as we shift from this app-based user experience to a more agentic operating system. This will be highly personalized, very context-aware, and will be enabled by a whole product ecosystem.

So we're going to be seeing quite a few AI hardware products launched by the end of the year. And yeah, I'm quite excited to see how this whole user experience will be brought to life. But I think overall, our relationship with technology will be a lot healthier. Technology will be there to empower us and give us more time to focus on the right things. So, I'm quite excited about what's to come.

Any message to Digit on completing 25 years?

A massive shout out to the Digit team. Our industry is extremely competitive, very hard, but I think the media business is even harder. So, being around for 25 years is a massive accomplishment, especially as we've seen tech drastically evolving in the last 25 years with more and more products coming into play, new formats, and new media. So, having that agility and continuously being able to innovate and be on top of all those trends is quite an impressive achievement, to be frank. So, yeah, shout out to the team and thanks for all the reviews and helping us buy our day-to-day tech products. 

Our whole society has drastically changed due to technology, especially due to this bad boy, the smartphone"
