

Beyond Specifications

SUNIL NAYYAR | MD, Sony India

Sony has spent the past 25 years moving from electronics to experiences. And from a global default to a brand that treats India as a top-tier growth market. Leading this charge, Sunil Nayyar, Managing Director of Sony India, aligns the company's vision for the next 25 years with a fundamental shift: the true measure of technology will move from what it does to what it enables in people

How has tech evolved over the past 25 years, with Digit in it?

The last 25 years in technology have been a journey from connectivity to immersion. We have evolved from the dial-up era to a world shaped by AI, silicon breakthroughs and intelligent sensing technologies that have transformed hardware from standalone devices into seamless extensions of human experience.

At Sony, we believe the next 25 years will define an era of "co-creation" where technology becomes adaptive, intuitive and deeply integrated into everyday life. The future will not be driven by isolated products, but by intelligent ecosystems that understand people, anticipate needs and amplify creativity, emotion and human potential. The true value of tech will no longer lie only in specs, but in what it enables for people.

As this evolution accelerates, trusted tech journalism becomes even more critical. For 25 years, Digit has played a pivotal role in bridging innovation and consumers

through credible reviews, rigorous testing and insightful storytelling, a role that will only grow more important in the future.

How is tech going to transform our lives in the next 25 years?

At Sony, we believe the future of technology will be defined not just by innovation, but by its ability to deepen creativity, emotion and human connection. Over the next 25 years, AI, immersive entertainment, spatial computing and hyper-connectivity will transform technology from standalone devices into intelligent ecosystems that intuitively understand people and deliver deeply personalized experiences.

We will also see breakthroughs beyond consumer electronics, with imaging, sensing and AI reshaping industries such as healthcare, education and mobility. Gaming and interactive entertainment will evolve

into mainstream cultural ecosystems, influencing how younger generations connect and express themselves. India will be at the heart of this transformation. Consumers today are more aspirational, experienced-driven and quality-conscious than ever before. That shift reflects the evolution of the Indian consumer, a generation that increasingly seeks not just products, but meaningful, immersive experiences.

Any message to Digit on completing 25 years?

Congratulations to the entire Digit team on completing 25 remarkable years. Over the years, Digit has played a defining role in shaping India's technology media landscape through credible reviews, rigorous testing and consumer-first storytelling. For brands like us, Sony, who are constantly driving innovation and premium experiences, platforms such as Digit have been instrumental in translating technology into meaningful consumer conversations.

What truly stands out is Digit's ability to evolve alongside the industry, staying relevant through every major shift, from the early internet era to today's AI-driven world. As technology becomes more immersive and intelligent, I am confident Digit will continue to shape the future of technology conversations in India for years to come. **d**
