

4 moves forward. The device is powered by the Snapdragon 8 Elite Gen 5 chipset, and in benchmarks, it delivers strong numbers. It scored 39,31,305 on Antutu, while Geekbench results came in at 3,390 for single-core and 10,022 for multi-core. In the 3DMark Wildlife Extreme test, it got an overall score of 6,868, and in the CPU throttling test, it retained 78 % of its peak performance.

Now, the results say that the hardware is capable. However, in day-to-day usage, I didn't feel any noticeable difference when compared to the OnePlus Pad 3, which was already powerful. Don't get me wrong here, the OnePlus Pad 4 delivers a buttery smooth and responsive experience. However, I couldn't find a tangible difference where I could straight off say that the new machine offers a leap in performance. Which, is true on paper, but in the real world, the experience feels similar to the older one.

You just know that if you are buying this, everything on the OnePlus Pad 4 will feel effortless. Multitasking, app switching, gaming, and much more, all remain fast and fluid. I tested BGMI and Asphalt: Legends on this tablet, and both games support 120fps without hiccups.

Even under sustained load, there's no performance dip. That said, if you are coming from the OnePlus Pad 3 and upgrading to the Pad 4, you won't really notice a world of difference in performance.

CAMERAS

The camera setup remains the same as last year, as we saw on the OnePlus Pad 3. The Pad 4 includes a 13MP rear camera and an 8MP front camera.

Image quality is sufficient for video calls, document scanning, and occasional use. Beyond that, you can shoot videos in 4K at 30fps, the overall quality is alright, which is expected, given this is a tablet we are talking about here.

On the front, you get an 8MP sensor capable of recording 1080p video at 30fps, which is once again pretty decent for taking video calls and meetings.

BATTERY AND CHARGING

Battery life is also one of the more practical improvements this year. The OnePlus Pad 4 now includes a 13,380mAh battery, and in heavy use, it gave me 10 to 11 hours of screen-on time, consistently. This makes it reliable for extended sessions without frequent charging.

Speaking of which, charging remains the same at 80W, and despite the larger battery, charging times remain manageable. The OnePlus Pad 4 takes about 1 hour and 45 minutes to fully charge from 0 to 100 per cent.

ONEPLUS PAD 4: VERDICT

The OnePlus Pad 4 feels like a product made with confidence. I feel that the company understood that the foundation was already strong, so instead of changing everything for the sake of it, it focused on improving the areas that really matter in daily use. To give you a refresher, the Pad 4 brings a brighter display, excellent battery life, dependable speakers, smooth software, and flagship-grade performance that never leaves you wanting for more. With useful extras like Open Canvas multitasking and the Stylus Pro, and the overall package feels polished and easy to live with.

However, I also won't deny that this is probably not the most exciting upgrade for existing OnePlus Pad 3 users. If you already own the previous model, the jump to the new one is not big enough to feel essential unless you specifically want the better battery or new accessories.

For anyone buying their first Android tablet, the OnePlus Pad 4 is a solid option. More importantly, it feels complete, and that isn't something every Android tablet manages to achieve.

—Siddharth Malhotra

SPECIFICATIONS

Chipset: Qualcomm Snapdragon 8 Elite Gen 5 Mobile Platform | RAM: 8/12 GB LPDDR5X | Storage: 256/512 GB UFS 4.1 | Display: 13.2-inch 3.4K LTPS LCD panel | Refresh rate: 144Hz | Brightness: 1080 nits | Camera (rear): 13 MP | Camera (Front): 8 MP | Battery: 13065 mAh | Charging: 80W
