

Motorola Razr Fold

The most sensible book-style foldable yet

Foldable phones are no longer just futuristic experiments that people look at from a distance. Over the past few years, these devices have quietly evolved into proper flagship smartphones with slimmer bodies, better hinges, brighter cover displays and enough power to challenge the traditional premium phones. And now, the market has clearly split into two personalities. The clamshell foldables have become the stylish, compact option for users who want something trendy and pocket-friendly, while the book-style foldables have carved out a space for productivity, multitasking and that tablet-like entertainment experience. Although almost seven years down, foldables are still not as mainstream as traditional phones.

Book-style foldables have always been expensive, particularly those in the ultra-premium category, making them both exciting and difficult to justify for most buyers.

While some brands have already taken hold in almost both of the categories, Motorola has now finally stepped into the book-style foldable segment with its Motorola Razr Fold. The company already understands the foldables. The Razr lineup has managed to build a strong identity in the clamshell segment, balancing the nostalgia with modern flagship appeal. And now with the Razr Fold, along with a relatively affordable price tag for a 'foldable,' the company wants to hold in the segment.

At Rs 1,49,999, the Motorola Razr Fold already undercuts rivals like the Samsung Galaxy Z Fold 7 and Pixel 10 Pro Fold while still promising flagship-grade specifications and the complete foldable experience. Naturally, that

₹1,49,999

makes this phone far more interesting than just another foldable launch.

But lower pricing alone is not enough anymore. The real question is whether Motorola has managed to bring something fresh to the category or if this is simply a more affordable

entry ticket into the foldable world.

More importantly, can it actually challenge the established players and become the book-style foldable that finally feels easier to recommend?

DESIGN

The Motorola Razr Fold feels like one of those devices where the company has clearly spent time understanding what people complain about. Over the years, foldables have become slimmer and more powerful, but many still struggle with awkward weight distribution, bulky hinges or designs that feel delicate

despite the premium pricing. The Razr Fold, at least in the first impression, tries to move away from that feeling.

Honestly, after using multiple generations of the Razr clamshell lineup, this one instantly feels different. The body is slim, the weight distribution feels balanced, and unlike some foldables that can make you nervous when unfolding, this one feels natural and smooth to open. Motorola's hinge tuning deserves credit here. It is not overly stiff, not too loose either, and that makes everyday usage much more comfortable.

One of the standout aspects is how thin this device is. At around 4.5mm when unfolded, the Razr Fold enters the territory where foldables stop feeling like 'thick experimental devices' and start feeling closer to regular flagships. Even when folded, it manages to stay relatively compact, considering this is an 8.1-inch book-style foldable. Yes, at over 240 grams, you still feel the heft in your pocket, but that is expected for this category.

The cover display is another area that immediately grabs attention. Motorola has gone with a large 6.6-inch external screen, and visually, it gives the phone a very modern look from the front. The panel itself looks vibrant and immersive, although I do think the bezels slightly take away from that near-futuristic appeal Motorola is aiming for. They are not bad, but once you notice them, you do wish they were slimmer.

Open the device and the main 8.1-inch display becomes the centrepiece. Motorola is heavily pushing the 'crease-less' experience here, but it is there. You can still notice it at certain angles under light, but while using the device for reading, streaming, or multitasking, it fades into the background fairly quickly.

The overall design language feels very Motorola. The back panel has that clean aesthetic with a square-shaped camera island with the triple-camera setup and an additional sensor. The Motorola logo sits in the centre, while the Razr branding at the bottom keeping it minimal without looking empty.
