HISENSE INTELLI COOL PRO 1.5 TON AC

Reliable cooling with reasonable smarts

G. S. Vasan | editor@digit.in

We are in the middle of summer, and some of you may be looking to buy an air conditioner. It could be your first purchase or an upgrade. Either way, you want a good deal. Well, I have been using the Hisense Intelli Cool Pro AC for a month now. It is a 1.5-ton, 3-star inverter AC with 5-in-1 convertible modes, 4-in-1 healthy filter setup, and a respectable warranty structure. It is listed at Rs 36,990, but with bank offers, its price comes to around Rs 32,490, which puts it in an interesting spot.

If you are looking for an AC in this range, read on to find out about its design, interface, how it actually performs day-to-day, and by the end, you can decide if the Hisense Intelli Cool Pro deserves your money or not.

Design and build

The Hisense Intelli Cool Pro has a minimal look. The indoor unit is a

clean white panel, 1022 mm wide and a slender 231 mm tall, which makes it one of the slimmest units in its price range. It practically disappears on our wall. The finish is fine, and I haven't come across any rattles, creaks, or loose parts so far.

The display is a hidden LED type, visible only when the AC is running. It shows the set temperature. Nothing fancy, but easy to read from across the room. The louvres are ABS plastic and move smoothly in a four-way swing.

Matching the indoor unit, the remote also has a white-ish complexion on the front side. The back side is grey in colour, and on the bottom, there is a battery cavity with a slide-in cover. The remote is slim, lightweight and due to its curvy back, it is comfortable to hold. It works wirelessly up to 21 feet. Since it is infrared-based, you'll have to point it at the AC to register commands. The buttons are clicky and have text and icon marking. So, you can easily

know which button does what. Using the remote in a dark room is also no problem, as the buttons are backlit. The rectangular screen above the button array is big enough for indicators.

The outdoor unit is also plain white in colour. There are vents through which you can see the fins with hairpin anti-corrosion coating. The compressor inside is made by GMCC, a leading manufacturer in this space. Both the compressor coil and the tube are made of copper. Overall, the outdoor unit has a metallic build and weighs around 30 Kg. While lifting it for installation, the technician did ask for a helping hand. So, that's a two-man job. And with that, let's get to the setup experience.

Performance and features

Hisense Intelli Cool Pro sports a cooling capacity of 5,100 W, which is the same as some 1.5-ton 5-star ACs from its leading competitors. Yes, the Hisense
