

With that said, not every smartphone camera, as good as it is, can be perfect, nor is this one. One of the cons I noticed is the camera's tendency to slightly brighten up faces in some photos, which does not look natural. One more thing, the Find X9 Ultra keeps more of the frame, i.e. background and foreground in focus, instead of creating that subject separation. So, because of this, you may find some of the portrait photos less dramatic.

In terms of zoom, at 6x, it performs extremely well; the facial details, beard texture, fabric patterns and even smaller textures remained highly detailed.

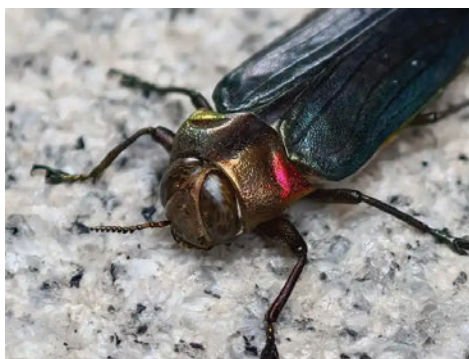

PERFORMANCE

Oppo Find X9 Ultra is a camera monster, no doubt about it, but it is also a power monster at the same time. Under the hood, this beast is repping a flagship Snapdragon 8 Elite Gen 5 processor along with 12GB of LPDDR5X RAM and 512GB of UFS 4.1 storage. Courtesy of the top-tier hardware, the phone feels snappy and is actually fast. App opening times are fluid, multitasking is smooth, and transitions feel polished. I mean, what else can you expect from a phone that has specs like this?

I also ran some benchmarks for those who care about numbers. In Antutu, it scored 4.10 million, which is bonkers. In Geekbench, the X9 Ultra scored 3,613 in single-core and 10,608 in multi-core. In the CPU throttling test, the CPU throttled to 86 per cent, and at last, in the 3DMark Wildlife Extreme Test, it got an overall score of 7,276.

Gaming-wise, this phone is sorted as well. I played three games on the X9 Ultra: BGMI, CODM and Genshin Impact, and I never got any stutter or lag during gameplay. The gaming experience is so smooth without any major fps drop, and the thermals were maintained even after an hour of gameplay.

You can play BGMI and CODM at 120fps with ease, and can play Genshin Impact at 60fps without any hiccups. I

wish I could also play Genshin Impact at 120fps, but that's fine.

The Find X9 Ultra comes with ColorOS 16 based on Android 16, and yes, ColorOS is great because it's almost the same as the OxygenOS on OnePlus devices. The OS is lightweight, clutter-free and runs smoothly. There are a lot of customisation options in the UI, plus there are some useful AI tools to work with. Like the AI Editor tool in the Photos app literally works great.

On the left of the device, there's a Snap Key, which we also saw in the previous Oppo devices. That also comes handy if you want to toggle certain actions, like turn on the DND mode, or if you quickly want to record a voice note, then you can do it instantly.

Oppo's software support policy is also great. They're promising 5 years of OS updates and 6 years of security patches. 5 years still feels less when companies like Samsung and Google promise 7 years of software updates.

BATTERY

Oppo continues to retain the Ultra title in the battery department as well.

It packs a 7,050mAh battery and supports 100W SUPERVOOC wired charging, and also supports 50W AIR-VOOC wireless charging. Thankfully, the charger is there in the box, but it comes with a Type A to Type C cable.

The 7,050mAh battery took 48 minutes to charge from 0 to 100, which is reasonable. In my PCMark Battery test, it got 17h 12mins, which is amazing.

In real-world usage, the phone easily lasted me 1.5 days. Depending on your mileage, the endurance can vary.

VERDICT

After spending a couple of weeks with the Oppo Find X9 Ultra, I think the company launched this with a purpose. While Oppo makes good camera phones, they didn't just want to make good cameras on this one; I think the focus was on making the entire photography experience feel complete.

The Find X9 Ultra's main camera is incredibly reliable, the portrait mode is easily among the best I've used on any smartphone, and that 10x optical telephoto lens genuinely changes how you shoot photos. Add to that a beautiful display, excellent battery life, flagship-level performance and a polished software experience, and you understand why this is an Ultra flagship.
