

Most important factor when buying a new TV?

TAKEAWAY:

Picture quality outranks smart features, sound and (surprisingly) even brand

What is the primary reason you would choose a larger-sized TV?

TAKEAWAY:

OTT and streaming are driving the big-screen upgrade in India in 2026

The sweet spot for TVs in India

When asked about the ideal TV size in 2026, the most popular answer was 50-55 inches, chosen by 36 percent of respondents. Nearly 32 percent of respondents selected either 65 or 75 inches and above as their ideal TV size.

This suggests that consumers are moving from the traditional 43-inch models, and they're going towards an immersive viewing experience.

Picture quality remains the highest priority

When buying a new television set, what are buyers looking after? Is it the

picture quality, the Smart TV features, the sound quality, or the brand rep?

Well, it shouldn't be surprising, but more than 60 percent of respondents selected picture quality as their top purchase consideration. Smart TV features and operating systems followed at 15 percent, while screen size, sound quality, and brand reputation were significantly behind. It suggests that consumers are actively prioritising actual viewing experience over anything else.

4K is a bare minimum

When asked about the minimum

acceptable resolution for a TV in 2026, more than half of respondents believe every new TV should offer 4K resolution. Only a small percentage considered 8K essential. Full HD still has some relevance among budget-conscious buyers, but the survey confirms that 4K is established as the bare minimum.

QLED is the most popular display tech

Last but not least, among display technologies, OLED and Mini-LEDs trailed behind significantly, as QLED emerged as the most preferred option for a future TV purchase, with nearly 37 percent of responses. OLED followed in second place with 19 percent, while mini-LED received 11 percent.

Interestingly, around 16 percent of respondents said that display technology does not influence their purchase decision. The results indicate that premium panel types are popular and are gaining wider recognition, but the enthusiasts are the ones who actually care more about it. For the general audience, a normal QLED remains the most popular choice.

Wrapping up

Our findings show that Indian TV buyers are increasingly interested in larger displays, and that the 50-55 inch slot is becoming the preferred size among buyers. While consumers value better viewing experiences and premium displays, pricing remains the biggest factor which is preventing them from upgrading right now. At the same time, picture quality continues to be the largest demand driver, and 4K has effectively become the baseline.

As TV prices fall and larger screen sizes become more accessible, the trend toward bigger televisions is likely to accelerate further. **d**
