INFINIX INDIA CEO ANISH KAPOOR QUILTS

Internal tensions and market decline to blame

Siddharth Chauhan | editor@digit.in

The Indian smartphone market can be tough and another brand seems to be feeling the heat. Infinix, part of the Transsion group and known for making entry to mid-level phones, is going through internal turmoil, witnessing a sharp decline in shipments, a reduced product portfolio and several leadership changes.

Importantly, Infinix India appears to be without a CEO. Multiple industry sources have told Digit that Anish Kapoor, who led Infinix India's operations, is on his way out. Anish could have resigned in January 2026 and is likely not a part of the company as of writing. Infinix, once the fastest-rising name in India's budget smartphone segment, appears to be navigating its most turbulent period yet.

While the split has not been publicly acknowledged, sources describe the fallout after a period of sustained disagreement between the India leadership and the brand's Chinese counterparts at parent company Transsion Holdings. According to one industry source, Anish's vision for Infinix's India strategy diverged sharply from what the Chinese leadership wanted. The tension, rooted in sales strategy and market positioning, eventually paved the way for Kapoor to part ways.

Digit spoke to some employees at Infinix India who told us that people from the marketing and product teams are jumping ship to rival brands.

While day-to-day operations are understood to have continued without major disruption, the leadership uncertainty appears to have left its

mark on the brand's product roadmap. Infinix launched considerably fewer smartphones (Note Edge and Note 60 Pro) between January and May 2026 than it did during the same period in 2025 which is a notable deceleration for a brand that once treated relentless product launches as a central pillar of its growth strategy.

Speaking with Digit, Yogesh Brar, tech analyst and market insights expert said, "A slower launch cadence is rarely a coincidence; it typically signals portfolio rationalisation, cash-flow constraints, or a strategic pause. Here, it's a combination of all three, compounded by rising costs for key components like DRAM and NAND, which disproportionately impact vendors with smaller scale and high low-end shares," Brar says.

Brar also addresses the multi-brand dynamic that underpins the tension within Transsion and what it means. "Transsion's intent is clear differentiation, where Tecno targets the mid-to-high end, Infinix courts fashion-forward youth and itel serves mass-market consumers. In theory, it's elegant, but in
