

practice and considering India's price-sensitive market with low margins, the lines blur fast and internal cannibalisation becomes real," he says.

Infinix had consolidated its position as Transsion's lead brand in India, but a string of market data points now collectively paint a more difficult picture: shrinking shipment volumes, softening market share and a global parent company facing mounting structural headwinds of its own.

Infinix's rise and the cracks beneath

As recently as mid-2025, the brand's India trajectory looked promising. According to a report published by OmIndia in July 2025, Infinix had overtaken Tecno to become Transsion's lead brand in India, driven by its design-forward approach and campaigns targeting gaming and creator communities. At the time, the brand was contributing 45% of Transsion's combined 1.8m India shipments.

A report by Cybermedia Research (CMR) published in August 2025 pointed to a 12% year-on-year decline

for Transsion Group in Q2 2025, attributing the drop to weakened demand in aspirational India, limited traction in the entry-level 5G segment, reduced channel push and growing competition from aggressively priced rivals.

Infinix's India market share data from StatCounter (GlobalStats), covering April 2025 to May 2026, traces the same trajectory. The brand held a stable position between 1.82% and 1.89% from April to August 2025, before dipping sharply to 1.38% in September 2025. It recovered through the final quarter of 2025 to post a near-term peak of 1.93% in December, but has since declined steadily, slipping from 1.89% in January 2026 to 1.63% by May 2026.

Barar puts the scale of the decline in perspective saying, "Infinix has faced a challenging 18 months in India. While the brand previously punched above its weight on volume, shipping 2.9 million units last year, volumes dropped to just 500,000 units from January to April 2026. This isn't isolated; Transsion's three brands, Tecno, itel, and Infinix, all posted a combined 20% year-on-year shipment decline."

Global lifeline (not India)

According to a Technisights report published in June 2025, Transsion fell to fifth position in the global smartphone market in Q1 2025, having briefly climbed to fourth the previous quarter. The combined shipments of Tecno, Itel and Infinix posted a 22% year-on-year decline in Q1 2025, starkly underperforming a market that grew just 0.5% in the same period. Technisights noted that before Q3 2024, the combined Transsion brands had enjoyed five consecutive quarters of growth. Rising component costs, weakening demand in key emerging markets, a more restrictive operating environment in Russia and intensified competition from Samsung and other Chinese brands were cited as the primary headwinds.

Digit also reached out to Infinix India with a detailed questionnaire asking about their leadership changes, the brand's strategic direction and what their product launch plans for 2026. The company had not yet responded or made a comment at the time of publication. **[d]**
