Apple is running its most powerful AI on Google's cloud

For years, Apple has made sure that you knew that your data belongs to you. Be it on the device or on the cloud – whatever they do with it, they keep it safe and within your control. It is the core principle of their brand, and something that has become almost an identity trait over the years. That is until WWDC 2026 came around.

Somehow, somewhere during the Liquid Glass keynote, Apple announced what it would have seemed impossible to happen a couple of years ago – their most sophisticated AI model is running on the servers of Google with Nvidia's hardware. The same Apple that built such a solid privacy story that it was a marketers' dream – "What happens on your iPhone, stays on your iPhone" – has finally turned to its arch-rival's cloud computing platform to host its most compute-intensive AI tasks. tinyurl.com/91ujsf3

Sakana AI's Fugu: This Japanese AI claims to match Anthropic's Fable 5 and Mythos Preview

BETTER THAN MYTHOS?

Japan-based Sakana AI has unveiled Fugu, a multi-agent AI system that rivals Anthropic's Fable 5 and Mythos Preview on key benchmarks. Instead of one LLM Fugu coordinates multiple publicly available AI models to complete tasks. While real-world performance remains to be tested, it shows that this method can match frontier AI capabilities. tinyurl.com/f9o8o3

Satya Nadella calls for more accessible AI, warns against dominance by few firms

Microsoft CEO Satya Nadella said AI should be affordable, widely accessible, and not controlled by a few companies. In a Wall Street Journal interview, he rejected the idea that AI

should replace white-collar workers, urging businesses to reorganise jobs instead and stressed that AI's success depends on earning public trust and sharing its benefits. tinyurl.com/8sksd812
