

UNDER-THE-RADAR AI TOOLS YOU MUST TRY

GO BEYOND CHATGPT, GEMINI AND CLAUDE

Team Digit | editor@digit.in

USE EVERY AI MODEL FROM ONE PLACE

OpenRouter — One API and dashboard for 300-plus models from 60-plus providers, with automatic fallback, data-policy controls and a live usage leaderboard. Pay per token, with free models available. The easiest way to try Claude, GPT, Gemini, DeepSeek and Qwen side by side without juggling separate accounts, billing or keys.
<https://openrouter.ai>

Eden AI — A single API spanning 500-plus models across text, OCR, document parsing, speech, translation and image analysis — and it is GDPR-native with EU data residency. Reach for it when you are building a multimodal product that needs far more than chat routing, all metered through one freemium account.
<https://www.edenai.co>

Portkey — An AI gateway built for production teams, focused on observability, compliance and

budget tracking across your LLM apps. A free plan covers experiments; paid tiers start around \$49 a month. Use it to monitor, govern and rein in spending once your AI features are live and serving real users.
<https://portkey.ai>

Requesty — A lightweight LLM gateway giving you one endpoint for hundreds of models, with smart routing, caching and automatic failover. Start free with daily credits, then pay as you go with a small markup. Perfect when you want multi-provider routing with the absolute minimum of setup fuss.
<https://www.requesty.ai>

LiteLLM — An open-source, self-hosted gateway that unifies access to every major LLM behind one OpenAI-compatible API. It is free and runs on your own infrastructure, so you keep full control over routing, logging and data. The pick for teams who would rather own the plumbing than rent it.

SUPERCHARGE RESEARCH AND READING

Elicit — An AI research assistant that searches 138 million-plus papers, auto-extracts findings into evidence tables and even runs systematic-review screening. A free tier exists; Plus starts at \$12 a month. Use it to compress a week of literature review into an afternoon of structured, sourced extraction.
<https://elicit.com>

Consensus — Answers yes-or-no research questions with a Consensus Meter that aggregates over 200 million peer-reviewed papers. The free tier is usable; Pro is around \$12 a month. Reach for it when you need fast, defensible evidence on a specific claim rather than a sprawling reading list.
<https://consensus.app>

Semantic Scholar — A free discovery engine indexing 200 million-plus papers, with AI-generated TLDRs and rich citation
