

Finally, the audio output is befitting the large visuals on screen. Be it gaming or the Top Gun Maverick dogfight, everything was loud and enjoyable on the Xiaomi S Mini LED 75.

DESIGN AND CONNECTIVITY

The Xiaomi S Mini LED 75 is massive but minimal. You see, the bezels are slim enough that they almost disappear once the content starts playing. This is largely because you are sitting in front of a 75-inch expanse that dominates your field of view.

The screen is held firmly by a chassis of reassuring quality, and the tabletop stands. These stands can be positioned either near the edges or closer to the centre. While setting it up,

natively, along with 120Hz DLG (Dual Line Gate) mode. This is a software-based upscaling that simulates a 120Hz refresh rate when you enable the Game Boost feature. Also, USB 3.0 would have been preferable as competing TVs have these specifications. Rest, on the rear, towards the right, there is a power cable, but no routing channels are present. Well, a built-in cable routing solution would have been sweet for a seemingly showpiece of a TV like this.

Xiaomi appears to have chosen to go large on not just the screen: The bundled remote is also longer than usual remotes. It has the table stake buttons, includes the hotkeys for all popular OTT platforms and Google Assistant voice control. Nice.

one of my friends was confused about what the optional cavities were for. We chose the extreme edge ones, and there is no worrying creak or flex. The option is appreciated.

And if you choose to wall-mount, no kit is included in the box. But if you do place it on the wall, the left-side-facing port array is easily reachable. The IO array includes 3 HDMI ports (one is HDMI 2.1 with eARC and ALLM support), 2 USB 2.0 ports, Ethernet, Optical audio, and wireless connectivity happens through Bluetooth 5.0 and Dual-band Wi-Fi.

Note that the panel supports a 60Hz refresh rate only, and so you get 4K 60Hz

But the problem is that because of the length of the remote, you'll have to do some finger gymnastics to reach certain buttons, especially the ones on the corners, like the Google Assistant button. Another personal gripe is with the location of the Patchwall UI button. I was accidentally triggering it several times, as many TVs have the back button there. But it is a matter of learning and habit. That's all.

SOFTWARE AND PERFORMANCE

The Xiaomi S Mini LED 75 runs Google TV based on Android 14 out of the box. And if you want a different UI, you can

jump to Xiaomi's PatchWall+ interface with a simple button click. PatchWall could help you discover regional content, and Google TV is also a reliable UI for content discovery. There is also Xiaomi TV+ for free ad-supported streaming channels. I appreciate the options on offer. You can cast content through Chromecast or AirPlay 2 and install other apps you like from the Google Play Store. The TV ships with 32GB of storage.

But there is a hardware limitation here. The quad-core ARM Cortex-A55 processor, coupled with just 2GB of RAM, shows the struggle when you switch between apps, open and close menus and load homescreen rows. This wasn't right away noticeable. Only when I was juggling multiple apps and cycling between screens and settings did things start slowing down. I also observed occasional lags while navigating picture settings with content still playing in the background.

SHOULD YOU BUY XIAOMI TV S MINI LED 75 2026?

At Rs 99,999, Xiaomi has priced the S Mini LED 75 2026 TV similarly to comparably specced TVs from Hisense and TCL. If your priority is a large-screen cinematic experience with vibrant visuals, strong brightness, and Mini LED contrast without spending flagship money, this TV delivers that experience rather convincingly.
