

The fan can also function as a power bank. Yes, Nuuk has given 5W reverse charging functionality with that USB-C port. So, the 6,000mAh fan could act as an emergency power source for a smart-watch or earbuds.

Cooling performance

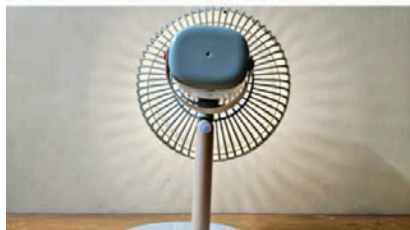

The Nuuk Lit v3 is powered by a BLDC motor that offers three speed settings along with a Wave mode that varies air flow automatically. The claimed airflow is 177 ft³ per minute and can rotate in a 120° radius.

On the lowest setting, the airflow is gentle and has the least noise of 32dB. This is comfortable and the least distracting. And the higher the speed you go, the better the cooling gets, and the noise gets louder. In the waking hours, the noise from the highest speed mode wouldn't bother me much, but I wouldn't want to hear it while I am trying to sleep.

You can feel the air within one to two metres. The airflow isn't as strong as a conventional table fan in the market, which can offer a lot stronger and faster air delivery. You can't replace an actual Farrata, cooler or AC with this. But, as a personal fan placed next to you while working, studying, cooking, or relaxing, you get a steady stream of air focused at you, offering some relief.

Battery life and charging

The fan packs a 6,000mAh battery, and

in real-world use, it lasts plenty long. It is rated for up to 17 hours of runtime, and in my experience, it covered an overnight use easily.

I was mostly running it in low or medium speed and never felt battery anxiety as such. Part of the reason is the USB-C port-based charging. I can charge it with the same Type-C cable as my laptop/phone charger. And even a power bank could fill its tank.

This meant a lot during power cuts, as this thing is portable and offers cooling without requiring a constant power supply. Also, if it was low on charge, I could use a power bank to refuel it. Well, to fully charge it, it would take 4 to 5 hours.

And that 5W reverse wired charging from its USB-C port can also come in super clutch at times.

Verdict

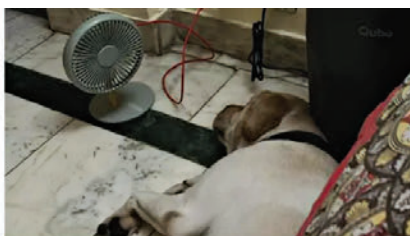

There are table fans in the market that can move a lot more air than the Nuuk Lit V3. If your primary requirement is maximum airflow for the money, a conventional table fan will serve you better.

But airflow is just one part of the bigger story.

What makes the Nuuk fan stand out is the overall experience. It is compact, rechargeable, easy to carry around, reasonably quiet at lower speeds, and comes with genuinely useful features like a remote, mood light, USB-C rechargeable battery, and power bank functionality. Add to that the charming design, and it feels more like a personal gadget than a household appliance.

At ₹2999, it is undoubtedly expensive for a rechargeable fan. However, after using it for a month, I found myself reaching for it far more often than I had initially expected, whether it was during a power cut, while working at my desk, watching television, or simply relaxing with Oscar nearby.

So, if you are looking for a portable personal fan that prioritises convenience, design, and everyday usability over sheer airflow, you can consider this Nuuk fan. But if you care more about strong air delivery, there are better options available for less money. **d**
