

#3 Years of constant curiosity

Though there are plenty of ICT magazines available, Digit is cut out from them. I have been reading Digit for almost the last fifteen years. It has undergone tremendous changes in terms of presentation, even the logo. But it constantly raises the curiosity of its readers to look forward to its contents, month after month. I love every section of it and particularly the cover features, reviews of various tech. products, KILL3R R1G5 and the Fast Track issues. All guys @ Digit including Editorial, News Team, Testers, Reviewers, ably assisted by other teams are doing excellent work, genuinely striving to bring the tech. related contents to its readers. Happy 25th Anniversary wishes and many congratulations to your entire team. I hope and wish you scale even further greater heights in the tech. journalism in the coming years and decades. Thanks & regards!

#5 Hooked from first issue

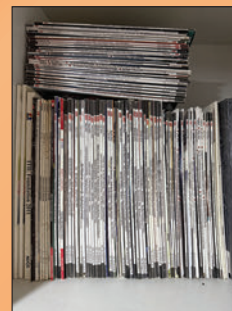

My first Digit (Fastrack) was about Blackberry Phones where my enthusiasm turned into a full time die-hard fan of Digit issues.

#6 Growing up with tech discovery

I first picked up Digit during my college days, when technology magazines still felt like treasure chests waiting to be explored every month. What made Digit special wasn't just the

reviews or news — it was the excitement of discovering something new with every issue. One of my favourite memories was waiting for the monthly CD/DVD that came with the magazine. Back then, getting access to software demos, wallpapers,

games, utilities, and tech tools through Digit felt like opening a portal to another world. I still remember spending hours exploring everything on those discs after school or college.

Digit wasn't just a magazine to me — it was part of growing up with technology. It shaped my curiosity, influenced many of my gadget decisions, and made learning about tech genuinely fun instead of overwhelming.

#4 Igniting a life-long tech passion

I started reading Digit in 2016, and specifically my first edition was the 2016 August edition. It was my first proper introduction to the tech world and my interest in tech and computing increased exponentially. It eventually became a part of me and I love it.
