

and reminds you why this is a premium device. It feels modern, responsive, and precise, and every tap feels deliberate, while gesture navigation works exactly as expected.

PERFORMANCE

The HP EliteBook X G2i is an absolute beast when it comes to performance, and I do not say that lightly. Throughout my testing, the laptop felt consistently fast regardless of what I threw at it.

Now my usual working day comes with dozens of Chrome tabs, productivity applications, messaging platforms, video calls, and occasional benchmarking runs. The laptop handled everything without any signs of struggle. This stellar real-world performance is backed by some strong benchmark results:

- PCMark 10 Overall: 7409
- 3DMark Time Spy: 7724
- 3DMark Fire Strike: 13,322
- 3DMark Night Raid: 45,772
- 3DMark Wild Life: 39,508
- 3DMark Wild Life Extreme: 12,548
- Cinebench Single-Core: 2074
- Cinebench Multi-Core: 1611
- PCMark Full SSD: 1591

Those are some really strong numbers that prove just how capable the HP EliteBook X G2i 14 is in terms of performance and consistency. You can go hours and hours of using it, and the

laptop doesn't ever feel sluggish in terms of speed and fluidity.

SPEAKERS, WEBCAM AND OTHER FEATURES

In most business laptops, the webcam just exists. But here, the 1080p front camera actually made me look decent during video meetings when I was sitting under white office lights. The colours are vivid, and the image quality remains quite clear. There is also a physical privacy shutter that can be toggled on and off.

The speakers are decent without being exceptional. They are perfectly capable of handling meetings, YouTube videos, podcasts, and casual entertainment. Not to impress audiophiles.

And of course, this is a CoPilot+ PC, so it comes with features like Recall and live captions with translation.

BATTERY AND THERMALS

Talking about Battery life, this is another area where the EliteBook performs well. During the PC mark battery test, the laptop lasted almost 12 hours. This was at 50 per cent screen brightness and best power efficiency mode. That means that even if you forget to carry your charger during a busy work day, there's nothing to panic about.

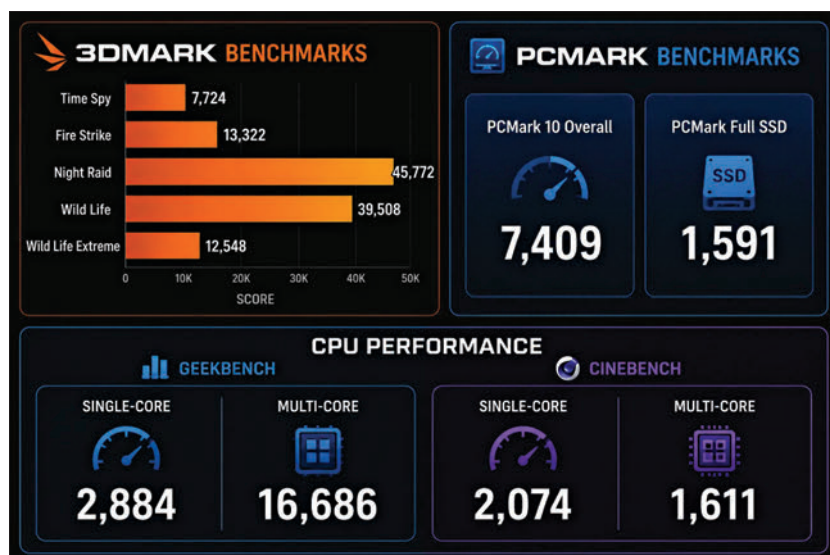

Moreover, when the laptop does run out of juice, charging speeds are quite impressive. The battery reaches 50 per cent in just 30 minutes, making things super convenient.

Thermals here are also well managed. Of course, the laptop does get slightly warm while demanding tasks, but things never get too hot to handle. Even when I was running benchmarks on it constantly, the surface temperatures remained under control. But the fan noise can get distracting at times.

VERDICT

The HP EliteBook X G2i is a laptop that understands its role. It isn't trying to chase trends or stand out in a market full of business professionals. If your priority is productivity and reliability, the HP EliteBook X G2i is an excellent business laptop. Just be prepared to pay a premium for the experience.
