Google DeepMind CEO calls for new AI regulator, Sam Altman and Sundar Pichai react

GoGoogle DeepMind CEO Demis Hassabis has proposed creating a FINRA-style regulatory body to oversee the release of frontier AI models. Initially, leading AI labs would voluntarily submit models for testing up to 30 days before launch, with the process potentially becoming mandatory later. The watchdog would evaluate risks including cybersecurity, biological threats, deceptive behaviour and agentic capabilities, while encouraging safeguards like AI image watermarks. The proposal received rare public backing from OpenAI CEO Sam Altman and Google CEO Sundar Pichai, signalling growing agreement among leading AI companies that independent oversight is becoming essential as AI systems rapidly grow more powerful. tinyurl.com/3xhvm2p2

OpenAI enters hardware market with Codex Micro

OpenAI has quietly entered hardware with the Codex Micro, a \$230 keyboard-like controller built with Work Louder for developers using its Codex coding platform. The compact pad packs 13 mechanical keys, a joystick, a dial and a touch sensor, all customisable via ChatGPT desktop. Six keys show live status of Codex AI agent threads, while the dial adjusts reasoning levels. It's not OpenAI's much-anticipated Jony Ive device, but a modest, symbolic first physical product, sold through Supply Co. tinyurl.com/jattfkz

Apple is planning to acquire chip startups to catch up in the AI race

Apple is exploring acquisitions of semiconductor startups to catch up with rivals. According to The Information, the company has been talking to bankers and chipmakers about

deals that would "boost its efforts to build server chips for running AI," after its in-house M2 Ultra systems and delayed Baltra chip left its AI servers underpowered. tinyurl.com/38mc75w6
