

ered personal technology such as smartphones, laptops, televisions, audio products and PC hardware. With these awards, the same testing-led philosophy is being extended to the appliances and smart home

products that form the technological backbone of modern Indian households.

The inaugural awards cover refrigerators, washing machines, air conditioners, vacuum cleaners, air purifiers, microwave ovens, dishwashers, water purifiers, home security devices and televisions. Every short-listed product was examined using a category-specific methodology developed by the Digit Test Labs. The evaluation went beyond specifications to consider

measurable performance, consistency, energy efficiency, ease of use, build quality, features and the overall ownership experience.

The winners featured in the following pages represent the products that performed most convincingly within their respective categories. Some stand out through raw performance, others through thoughtful design, effective automation or a particularly well-balanced user experience. What connects them is their ability to deliver tangible benefits rather than merely promising them.

Digit India's Top Appliance Awards 2026 is intended to serve as both a record of the year's strongest products and a practical reference for anyone preparing to make a long-term purchase. These are the appliances that truly earned their keep. Now, it is time to meet the winners. **d**

ESTEEMED JURY'S ANALYSIS OF DITAA 2026

"The experience has been wonderful. The awards analysis and all the nominations were very deeply presented by the Digit team, and I hope we have been worthy enough to find the winners. Digit is different in the sense that these kinds of awards are very in-depth – the analysis is different, it's based on real-time testing of these products, and a lot of in-depth analysis with all the data points is done when judging these awards. That's how it's very unique and very different from other awards in the industry. Since these are actually based on the specifications, the features and the technical abilities of these appliances, and the use case at home – because the Digit team has tested and used these products in their lab – this will really help the consumer in making very wise and informed decisions. Wishing the best of luck to all the winners, all the brands, and the technical and reviewing team at Digit."

NAVKENDAR SINGH
Associate Vice President,
IDC

"Being part of the jury was a fantastic experience, as the process was very much backed by data and insights. All the awards and their testing insights we saw were thoroughly researched and all the products have been tested very thoroughly. Even the selection process has been great, so I'm very much impressed with the entire journey. While we were scanning through all these categories, these were almost like a 55-60 billion dollar category in India – it is massive if you add up all these categories. Consumers are investing their time and hard-earned money on these appliances for a much longer period of ownership; high chances you will use it for a good 8 to 10 years, so the decision making is very important. What Digit is doing here is very commendable, bringing attention to these products and highlighting the key features that consumers should be aware of before going for the purchase."
