

Asus AiO

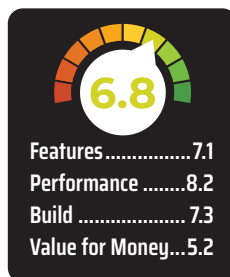

Minimalist look, maximum performance

I type... a lot. And my workspace, (just like many other writers), has a hard time staying clean. Okay, let's say I may be having a hard time keeping it clean, but that isn't what we need to focus on. What we do need to focus on is the reason behind all that clutter. Endless gadgets, chargers, external drives, cables and all the other accessories that somehow always end up scattered here and there. So when I got the opportunity to review the new Asus AIO (All-in-One), I couldn't help but wonder if this could finally give me a cleaner, more organised workspace. And after using this as my primary work machine for over a week, I can say that it does the job its meant for flawlessly.

Unlike a traditional desktop, there isn't a bulky CPU tower sitting under the desk or a dozen cables running in every direction. The PC is built right into the monitor stand, making the setup look far cleaner than what I'm used to. Now, of course, good looks alone aren't enough, especially when the Asus AIO comes with a price tag of Rs 1,11,990. So, does this device deserve your hard-earned money? Let us find out.

SETUP AND INSTALLATION

Setting up and installing the Asus AIO was super quick and easy. All you need to do is take the Asus AIO out of the box, connect it to a power source and press the power button located on the right edge of the monitor stand and connect its receiver to a USB-A port at the back of the monitor. Once the PC powers on, simply switch on the wire-

less mouse. The bundled keyboard doesn't come with a dedicated power button and automatically pairs with the system during the setup process.

DESIGN AND BUILD

Asus has been really smart with the design here. The entire PC is inside the monitor stand, which means it takes up less space and gives you a much cleaner desk. And trust me, if your workspace gets messy as quickly as mine does, you'll love this.

Another thing I loved is that despite everything being packed inside, this thing isn't ridiculously heavy. I was able to take it out of the box and set it up on my work desk all by myself. So if you ever need to move it between rooms or offices, it isn't going to be a huge task.

But, I also want to mention about something most brands don't really get enough credit for: the ports. And Asus has done a great job here. At the back of the monitor, you get an HDMI port, Ethernet, and three USB Type-A ports.

And the ports you'll probably use every day, like the USB Type-C port and the headphone jack, are placed on the left side of the monitor stand. That means if you quickly want to plug in your headphones or connect an external device, you don't have to reach behind the monitor every time awkwardly.

With that said, one thing that I did miss here was the height adjustment option. You can tilt the monitor to find a comfortable viewing angle, but that's about it. If your desk or chair sits a little higher or lower than usual, you might have to rely on a monitor stand or adjust your seating position to get the screen exactly where you want it.

But overall, the monitor itself feels premium and well-built, has a reassuring weight to it, and nothing feels flimsy.

KEYBOARD AND MOUSE

The Asus AIO comes bundled with a wireless keyboard and mouse. Starting with the keyboard, this is a full-sized 104-key layout, so you get a dedicated number pad and all the standard keys. And the typing experience also happens to be actually pretty decent. The keys are responsive and comfortable, once you get used to them. Personally, I come from a MacBook Air, so it definitely took me a day or so to get used to this Asus AIO. But once I adjusted, I had absolutely no issues writing long stories throughout the day.

As for the mouse, performance-wise, it is completely fine and does its job well. Clicks are responsive, tracking is accurate, and the scroll wheel feels smooth. My only complaint here is, well, the size. During my usage, my wrist kept touching my desk continuously. The mouse simply felt like it was too small. Now it was not so uncomfortable that I wanted to stop using the mouse altogether, but I definitely would've preferred a slightly larger mouse. Also, while both accessories work well,
