

they don't really feel like accessories that come with a PC costing over Rs 1 lakh. A little more premium look and feel would've completed the package.

DISPLAY, WEBCAM AND SPEAKERS

The Asus AIO gets a 24-inch touch-screen IPS panel. And the first thing you'll notice here are the slim bezels. These don't just enhance the overall feel but also give you that little bit more of usable screen space. Speaking about the touchscreen here, it might appeal to some users, but as for me, all it had done is cause me to keep accidentally closing important tabs while adjusting the viewing angle of the monitor.

The good thing is that this display comes with a matte finish, which means that reflections here are never a problem. I was able to work here comfortably even when I was sitting under those bright office lights. And that is a huge advantage.

Brightness is another area where the display performs well. In fact, I spent most of my time using it at about 40 per cent brightness. Turning it all the way up to 100 per cent felt a little too bright for my eyes, so I never really needed to push it that far.

As for the webcam, it's decent enough for everyday use. Whether it's Teams meetings, Zoom calls or catching up with colleagues, it gets the job done without any major complaints. It's not going to blow you away with image quality, but it does what's expected.

The speakers, on the other hand, were a pleasant surprise. I watched the

trailers for Assassin's Creed Resynced and Marvel's Wolverine, and the audio sounded clear throughout. Dialogues were easy to hear, and action scenes had enough depth to make them enjoyable. Now, of course, these won't replace a dedicated pair of speakers. But for attending meetings and casual content consumption, the speakers are good.

PERFORMANCE AND BENCHMARKS

Now you could do everything right on a desktop, but it means very little if the performance isn't there. And thankfully, that is not the case with the Asus AIO. This machine is super responsive, and day-to-day performance was never an issue during my time with it. Running multiple apps, keeping around 20 Google Chrome tabs open, or working across Microsoft Office apps, the PC never felt like it was struggling. Everything remained smooth, even during long work sessions.

I also ran several benchmark tests on the Asus AIO, and here's how it went.

In the PCMark Applications test, the Asus AIO scored 12,942 points overall, including 7,041 in Word, 20,731 in Excel, 12,815 in PowerPoint and 15,001 in Edge. So if your work revolves around Microsoft 365, this machine is more than capable.

Moving on to Geekbench, it scored 2,121 in single-core and 10,587 in multi-core. In Cinebench R23, the machine scored 5,207 points in the multi-core test and 968 in the single-core test. And in the 3DMark Night Raid test, the Asus AIO managed 16,238 points.

SHOULD YOU BUY?

So... coming to the Rs 1 lakh question: should you get the Asus AIO for your home or office setup? Simply put, if you're someone who wants a desktop without a bulky tower and messy cables, this machine is built for you. It looks clean, saves up space, and comes with excellent performance and display for everyday work.

Granted, at Rs 1,11,990, this isn't exactly an affordable desktop. Especially when previous Asus All-in-One PCs have been available for almost half that amount. So yes, you're paying a premium. But if you have the budget and want a clean, clutter-free desktop that performs well, look no further.
