

ONEPLUS N6 VS MOTO G37 POWER

Which smartphone offers
better value under ₹20,000?

Siddharth Malhotra | editor@digit.in

T

he sub-Rs 20,000 segment has emerged as the new affordable smartphone category

today. Brands these days are trying to offer a more balanced experience with larger batteries, high refresh rate displays, cleaner software, improved durability, and better cameras. That brings us to the two devices that follow a similar path: the OnePlus N6 and the Moto G37 Power. Both devices target the same audience, but they take different approaches.

Design and build

Both brands have done a fantastic job with their smartphone offerings, because the first thing you'll notice is the design, and neither phone looks like they belonged to the budget segment.

The OnePlus N6 follows a design language that closely resembles the company's premium smartphones. The

squarish camera module on the back gives you a familiar look, and the flat frame keeps the overall design minimal. Right after you pick up the phone, you can feel how dense it feels, and in a good way. Because of the 8,000mAh battery, the N6 weighs around 224 grams and measures 8.5mm thick. Despite that, it doesn't feel uncomfortable, but you will notice the extra weight during an extended period of using the phone.

On the other hand, the Moto G37 Power comes with a vegan leather finish that offers better grip and feels comfortable to hold for long periods. The phone is also lighter and slimmer, making

it easier to use throughout the day.

Durability-wise, the OnePlus N6 comes with MIL-STD-810H certification and an IP65 rating. Motorola also gets MIL-STD-810H certification, but comes with an IP64 rating, and on the front, you get Gorilla Glass 7i protection.

The Moto G37 Power has some extra features compared to the OnePlus N6. It includes a 3.5mm headphone jack and supports microSD cards of up to 1TB. The stereo speakers on both devices perform well for the asking price.

Display

Now, this could be a bummer for buyers as both smartphones feature LCD panels instead of AMOLED displays. Unfortunately, this is the new normal, at least in 2026, given the current market scenario.

The OnePlus N6 and Moto G37 Power come with 6.8-inch and 6.67-inch displays, respectively. Both phones offer
