

DREAME L50S PRO ULTRA

A premium vacuum cleaner, pet monitor and home companion in one

G. S. Vasan | editor@digit.in

I recently reviewed the Mova E40 Ultra, a robot vacuum cleaner priced at Rs 47999.

Around the same time, I also received the Dreame L50S Pro Ultra for review, which costs Rs 79999. On paper, the Dreame promises higher 30,000Pa suction, hotter mop washing, more advanced camera-assisted navigation and even pet monitoring. But do these features make a meaningful difference in everyday use, or are they simply nice additions to an already capable robot vacuum? Well, you would get a noticeably better ownership experience, but not in the way you'd expect.

The Dreame L50S Pro Ultra doesn't just simply clean your house for you, it is also convenient to use. It quietly takes care of everyday floor cleaning, navigates obstacles more confidently and automatically takes care of most of its own maintenance. It struggles with sticky stains, but those are some minor compromises. At Rs 79999, it offers a refined, largely hands-off ownership experience and is a strong choice for anyone who is looking to buy a premium robot vacuum for their homes.

Powerful, quiet and quick

While the higher suction power of the Dreame L50S Pro Ultra cleaned stains better than the Mova E40 Ultra, there isn't a dramatic difference. The floors didn't suddenly become cleaner. In fact, I found the experience very comparable since both Mova and Dreame belong to the same ecosystem.

Compared to a competing product in the same price range, the Dreame vacuum cleaner used less water while mopping, but took longer or more cycles to clean some tomato ketchup stains. It is fairly fast at its job, cleaning the perimeter first and then the area within in an S-shaped pattern.

You just need to give it commands through the app, and the machine is intelligent enough to work without further intervention. It follows its route, cleans the area, returns to the dock for refilling water, charging itself or clearing the dust and dirty water. It automatically empties its dustbin, refills its onboard water tank, washes the mop pads with hot water, dries them with hot air and even dispenses detergent automatically after you fill the dock's

detergent tank. These are the quality-of-life features that make living with the robot easier over time.

The L50S Pro Ultra is one of the quietest robot vacuums I've used. Even while vacuuming, it never became noisy enough to interrupt conversations or distract me while working. It gets loud when the dock empties the dustbin or dries the mop pads, but those tasks don't last long and are easy to ignore.

That doesn't mean it's flawless. Sticky stains still needed two or three cleaning cycles before disappearing completely. It sometimes fails to clean hair follicles, and also, since it is bound to a pattern, if there are obstructions, it may not always clean perfectly.

Familiar design and app

The L50S Pro Ultra sports a circular design with a height of 10.38 cm, and when combined with the docking station, neither is too heavy. So, you can move them around easily, if required. The build quality looks and feels decent. Only after long-term use will we know how durable the robot and its various components are.
