

A new chapter for Digit

Two months ago, as Digit marked its 25th anniversary, I spoke about our next chapter of growth – one anchored in deep coverage of Artificial Intelligence and Home Appliances. While details were under wraps back then, I am thrilled to share that Digit is officially entering a bold new era. We are extending our signature, independent testing capabilities to large appliances. Over the past quarter, our in-house experts across Noida and Mumbai have dedicated more than 2,000 hours to rigorously testing home appliances, culminating in the inaugural Digit India's Top Appliance Awards (DITAA).

When Indian consumers buy an appliance today, they are flooded with marketing claims, paid reviews and superficial spec sheets. The industry lacked a truly credible, unbiased, and rigorous testing system built specifically for Indian conditions. Recognising this critical gap, Digit took a leap of faith. Driven by our tech testing heritage, our team worked relentlessly behind closed doors to conceptualise Digit India's Top Appliance Awards (DITAA).

This was an unprecedented undertaking. Over three intense months, more than 140 products were sourced, catalogued, and evaluated – a process spanning more than 2,000 hours from start to finish. Every nominee was subjected to controlled, repeatable testing inside Digit's laboratory using calibrated instruments and category-specific test procedures.

Each product was examined across an exhaustive matrix of over 150 technical parameters, covering performance, efficiency, consistency, usability, and long-term ownership. We looked far beyond spec sheets, using thermal imaging, power analysis, acoustic measurements, real-world usage tests, and even evaluating the customer-support cycle. Thousands of individual results were cleaned, cross-checked, and analysed under the independent oversight of an expert jury.

All the data collected through this rigorous process will now be converted into clear, transparent ratings on Digit's website. This will allow Indian consumers to cut through

“This will allow Indian consumers to cut through the noise, compare products based on hard evidence, and make the right buying decisions every single time.”

Manas Tiwari
Editor

the noise, compare products based on hard evidence, and make the right buying decisions every single time. And this is only the beginning. Building on this momentum, Digit will extend its product categories to include kitchen appliances, grooming devices, home lighting, smart home ecosystems, and more for next year's DITAA.

However, the year is far from over for us. While our appliance testing team gets a well-deserved breather, the madness of the Digit Zero1 Awards begins. Smartphones, PCs, and audio devices make their grand comeback, and this year, we are placing a much bigger focus on the evolving space of smart wearables, including smart glasses and smart rings.

For our gaming community, SKOAR! will be back soon as well. We are gearing up for our next major esports competition, designed to engage, challenge, and unite gaming enthusiasts across colleges all over India.

As technology continues to reshape how we live, work, and play, Digit remains firmly committed to guiding you through every step of the journey with uncompromised data, truth, and passion. **d**
