RESEARCH Q

ROBOT VACUUM CLEANERS

Indian customers prefer them but after-sales falls short

Agent 001 | editor@digit.in

D

igit's latest consumer survey, which ran alongside the Digit India's Top Appliance Awards 2026 or DITAA 2026, gathered close to 6,000 responses across four categories, vacuum cleaners, water purifiers, security cameras, and air purifiers. The findings offer a clear insight into how households are approaching buying small appliances this year, from preferences and expectations to privacy concerns

around connected smart devices. Last month, we asked our audience about large appliances, including refrigerators, washing machines, dishwashers and microwave ovens, and the responses indicated a clear finding. Which was: Appliance buyers want more smart features but less energy bill.

Let's deep dive into what matters to Indian appliance buyers when it comes to the following categories...

Vacuum cleaners: Robots lead, after-sales still a weak spot

In terms of vacuum cleaners, there was a surprising revelation that robot vacuum cleaners today have become the most common format amongst owners, it was chosen by over 56% of respondents. The corded upright models came at around 19%, while cordless stick vacuums accommodated for 15% of the votes. Last but not least, wet-and-dry vacuums trailed at around 10% votes.

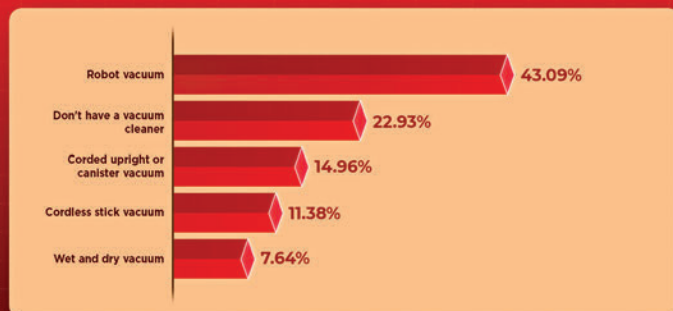

In terms of brand preference, Philips led the race with around 37% share, followed by the fragmented "Others" category at 31% suggesting that smaller players in the space hold a good amount of market share. Dyson held around 15% share, with Eureka Forbes and Agaro closely following by 9% and 8% respectively.

After sales was an interesting aspect. While 50% of the respondents suggested that their after sales experience has been good. However, more than 32% respondents remained neutral on this front. The number
