

Lite, an eight-core, 6nm chip clocked at up to 2.4GHz. iQOO offers the Z11 Lite across three memory configurations: 4GB plus 128GB, 6GB plus 128GB, and 6GB plus 256GB, with storage expandable up to 2TB via microSD if you need more room.

The review unit I tested handled everyday usage comfortably. Opening multiple apps, switching between Chrome, WhatsApp, Instagram, Spotify and YouTube rarely caused major slowdowns. That said, this isn't the fastest phone in its segment.

There were occasional animation hiccups while quickly switching between heavier applications, and I noticed brief stutters while loading image-heavy social media feeds. Nothing that made the phone frustrating to use, but enough to remind you that this is an entry-level chipset. Gaming performance is exactly what I expected.

BGMI runs comfortably at around 60fps with occasional frame drops during intense fights or hot drops. Casual games like Subway Surfers, Clash Royale, and Temple Run ran smoothly without any noticeable issues.

CAMERA

iQOO Z11 Lite comes with a 50MP primary sensor along with a 0.08MP depth sensor on the back of the phone, while the selfies on the front are handled by the 5MP front camera.

In daylight photos, the photos that came out of it were nice. Colours stay

fairly on the natural side instead of looking artificially boosted. However, the skin tones are generally on the brighter side. The dynamic range is decent, I would say, for the price. But at the same time, there are not enough details in the pictures, plus it softens the images at the same time as well.

Portrait mode, however, remains inconsistent. Edge detection is not really all that good because in one of the pictures, it blurred the right side of my friend's glasses. But eyewear isn't the only area it messes up in, it also struggles around hair, which was very apparent in one of my own photos.

Indoor photography is acceptable as long as there's sufficient lighting. Once the light starts dropping, you can easily see the drop in image quality.

Selfies are decent but tend to brighten skin tones more than I'd personally prefer. They're perfectly usable for social media, although they won't impress a lot of users.

Video recording maxes out at 1080p 30fps from both the front and rear cameras. Footage is usable in daylight, but stabilization is very basic.

VERDICT

The iQOO Z11 Lite isn't trying to be the most powerful camera phone or the fastest gaming phone in its category. Instead, it focuses on delivering a dependable everyday smartphone experience. After using it as my daily device, I came away appreciating its strengths more than its weaknesses. The battery life is genuinely excellent, the software experience feels polished, performance is reliable for everyday workloads, and the new Solar Flame finish gives the phone a distinct look. At the same time, the HD+ LCD display feels dated compared to AMOLED alternatives, the cameras remain fairly basic, and power users may notice occasional stutters during heavier multitasking.

If you're looking for a phone primarily for long battery life, dependable day-to-day performance, smooth software, and a distinctive design, the iQOO Z11 Lite is an easy recommendation to make. Just go in with realistic expectations especially regarding its display and camera hardware.

– Siddharth Malhotra

SPECIFICATIONS

Processor: MediaTek Dimensity 6300 5G | RAM: 4/6 GB | Storage: 128/256 GB | Display: 6.74-inch HD+ LCD panel | Refresh Rate: 120 Hz | Brightness: 1200 nits | Camera (Rear): 50 MP + 0.08 MP | Camera (Front): 5 MP | Battery: 6500 mAh | Charging: 44W
