

fine for the part and price. Again, lower volume level and more sound leakage than in-ear buds are part of the package. Even though the Boat Hearables app consists of a Private Mode in EQ settings, which is meant to reduce sound leakage, my neighbour could still hear what I was listening to. Open earbuds after all.

BOAT AIRDOPES PROCLIP: CALLS AND AMBIENT NOISE

Open earbuds like the Boat Airdopes ProClip are best used while walking outdoors and in any situation wherein you want to hear what's happening around you. You don't need to turn on transparency or ambient mode. It is on by design, and there is no artificiality to the ambient sound and voices.

As for voices over calls, the quality was adequate indoors. I could hear the other person well, and their voice sounded clear and familiar. But they mentioned that I sounded a little bassy. And, as you would expect, surrounding noises were creeping in.

BOAT AIRDOPES PROCLIP: BATTERY LIFE AND CHARGING

Each earbud packs a 50mAh battery,

while the charging case has a 500mAh battery. Together, they are rated to provide up to 52 hours of total playback at around 60% volume. Our test involved running it continuously, playing a FLAC music file at 80% volume, and it lasted around 8 hours.

The earbuds are said to take 50 minutes to fully charge via the USB Type-C port, while the case takes up to 2 hours. Additionally, the fast-charging feature is quite useful. A 10-minute charge provides up to 200 minutes of

playback, according to Boat. That should give the earbuds enough charge before leaving home.

For everyday use, the battery life is more than sufficient. You can wear these through a workday and several workouts without thinking much about charging.

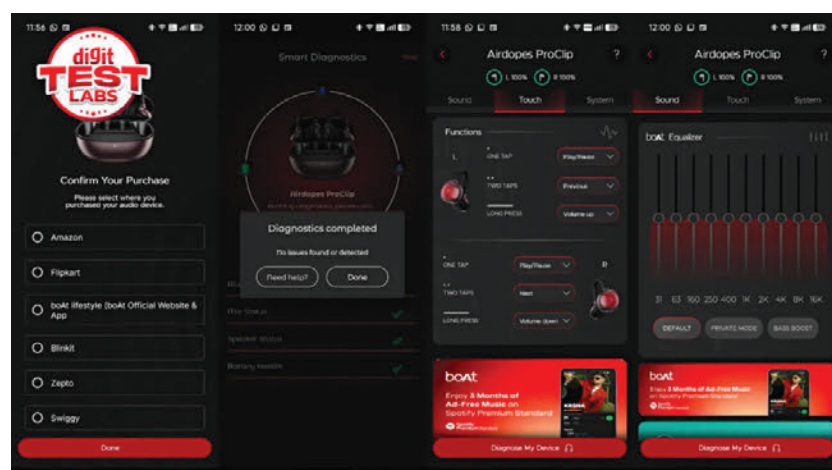

SHOULD YOU BUY BOAT AIRDOPES PROCLIP?

At Rs 1799, the Boat Airdopes ProClip makes sense if you specifically want the benefits of an open-ear design. It is comfortable, stays secure during workouts, has good battery life, and lets you hear your surroundings without relying on a dedicated transparency mode. I also found the sound output decent.

However, as expected from this design and price, there are some compromises. You get more sound leakage and less bass impact than a sealed TWS earbud. Call quality is adequate indoors, but background noise can creep into calls outdoors.

As long as you can live with these trade-offs, for under Rs 2000, you can absolutely consider the Boat Airdopes ProClip for your open-ear journey.
