

MOTO G MAX VS REDMI NOTE 17 VS ONEPLUS NORD CE6 LITE

Which is the best phone under ₹30,000

Siddharth Chauhan | editor@digit.in

T

he Moto G Max has officially launched in India at roughly the same price band as the Redmi Note 17 and OnePlus Nord CE6 Lite. While each is built around different set of priorities and by extension, different types of users, all three phones are some of the best phones under Rs 30000 in India right now. The Moto G Max is positioned around camera and audio, the Redmi Note 17 around display and battery and the OnePlus Nord CE6 Lite around all-day performance and fast charging. So, choosing between them can become confusing but let's start with which of those priorities matches your use case closely.

Design and build

All three phones carry IP64 dust and

splash resistance along with MIL-STD-810H military-grade durability certification. The Redmi Note 17 is the exception here, stepping up to IP65, which adds protection against low-pressure water jets in addition to splashes. The Note 17 has an edge when it comes to outdoor use in rain or dusty environments. The G Max and Note 17, both use Corning Gorilla Glass 7i on the front.

The Redmi Note 17 is the heaviest of the three at 225 g, marginally ahead of the Moto G Max at 213 g and the Nord CE6 Lite at 208 g.

Display

The Redmi Note 17 uses a 6.9-inch AMOLED display with 1,800 nits peak brightness, TÜV Rheinland certification for low blue light and PWM and Hydro-Touch 2.0 for wet-finger responsiveness.

For media consumption, the AMOLED panel's contrast, colour depth and outdoor visibility are in a different category from the LCD panels in the other two.

The Moto G Max and Nord CE6 Lite both use 6.72-inch FHD+ LCD panels. The G Max runs at 120Hz with up to 1,050 nits in high brightness mode and Motorola's Water Touch for wet-hand use. The Nord CE6 Lite pushes to 144Hz with up to 1,000 nits and a 240Hz touch sampling rate, making it the smoothest-scrolling LCD in the group. If viewing experience is not your priority, the Nord CE6 Lite's 144Hz advantage over the G Max's 120Hz is a meaningful difference for gaming and daily scrolling.

Performance and chipset

The Snapdragon 6s Gen 4 in the Moto G Max is a tier above the Snapdragon 4
