

PHONE	CHIPSET	RAM	RAM TYPE	STORAGE	UFS
Moto G Max	Snapdragon 6s Gen 4 (4nm)	6GB	LPDDR5X	128GB	UFS 3.1
Redmi Note 17	Snapdragon 4 Gen 4 (4nm)	6GB/8GB	LPDDR4X	128GB	UFS 2.2
Nord CE6 Lite	Dimensity 7400 Apex (4nm)	6GB/8GB	LPDDR4X	128 or 256GB	UFS 3.1

PHONE	BATTERY	MAX WIRED CHARGING	REVERSE CHARGING	IN-BOX CHARGER
Moto G Max	7,000 mAh (Si-C)	30W (supports)	No	33W
Redmi Note 17	8,000 mAh (Si-C)	45W	22.5W reverse wired	45W
Nord CE6 Lite	7,000 mAh	45W SUPERVOOC	10W reverse	45W

Gen 4 in the Redmi Note 17. The Nord CE6 Lite's Dimensity 7400 Apex claims an AnTuTu score exceeding 1,030,000 and a 43% performance improvement over its predecessor. All three handle everyday tasks without issues. But the differentiation shows under sustained gaming or heavy multitasking loads.

The Moto G Max's 6GB LPDDR5X RAM is faster in bandwidth than the Nord CE6 Lite and Redmi Note 17's LPDDR4X RAM. Both phones offer more RAM but at an older, slower standard.

The Nord CE6 Lite also includes bypass charging, which routes power directly from the cable to the phone's processor during intensive tasks rather than cycling through the battery.

Camera

Moto G Max features a 50MP Sony LYT-600 primary sensor (1/1.95-inch, f/1.8) with an 8MP ultrawide at 118° and a 32MP quad-pixel front camera. The Sony LYT-600 is a well-regarded sensor at this price, the ultrawide provides a second focal length for wider shots and the 32MP selfie camera is the highest-resolution front sensor in the group.

Nord CE6 Lite uses a 50MP Omnivision OV50D40 primary (1/2.88-inch, f/1.8) with a 2MP monochrome depth-assist secondary. The primary sensor is smaller than the G Max's and the 2MP secondary adds negligible photographic value. The 8MP front camera has no OIS. Video maxes out at 4K 30fps.

Redmi Note 17 has a single 50MP rear camera, no ultrawide. The front camera is 8MP without autofocus. At Rs 27,999, the absence of a wide-angle lens is a notable compromise that buyers should factor in. If photography is a consideration, the Redmi Note 17 is the weakest option in this group.

The Moto G Max is the clear camera choice here. Neither competitor offers an ultrawide lens or comes close to the G Max's selfie camera hardware.

Verdict

Buy the Moto G Max if you want a camera. The Sony LYT-600 sensor, 8MP ultrawide and 32MP front camera make it the best for photos here. The 3.5mm headphone jack and Dolby Atmos stereo speakers are exclusive to the G Max. Accept the slower charging and the shorter software support window.

Buy the Redmi Note 17 if you spend most of your time watching content or are a heavy daily user who needs the biggest battery. The 8,000 mAh cell and AMOLED panel are the best in the group for those specific needs. The camera is the price you pay for it.

Buy the Nord CE6 Lite if you want the most balanced all-round option at the lowest price. Starting at Rs 24,999 with 45W charging, bypass capability, a 144Hz display and OxygenOS, it covers most use cases competently. The camera is not exceptional and the LPDDR4X RAM is a step below the G Max, but neither should really be a dealbreaker at this price tier. **d**

MODEL	VARIANTS	PRICE
Moto G Max	6GB + 128GB	Rs 27,999 (effective Rs 26,999 with bank discount)
Redmi Note 17	6GB + 128GB	Rs 27,999
Redmi Note 17	8GB + 128GB	Rs 30,999
OnePlus Nord CE6 Lite	6GB + 128GB	Rs 24,999
