

WOZOYO PURE AIR PA6

How good is this new entrant?

Vikhyat Rishi | editor@digit.in

Until a few years ago, air pollution in India was largely a seasonal concern, making air purifiers feel more like a convenient gadget than something you actually needed at home. Now, the situation has changed considerably, with poor air quality becoming a more regular concern in several parts of the country. And as someone living in Delhi NCR, looking for an air purifier wasn't really a choice for me.

Luckily, I didn't have to spend anything on one, as Wozoyo, a new entrant in the Indian air purifier market, sent us its Pure Air PA6 for review. At the time of writing, the air purifier retails for around Rs 25,000 on Amazon. Going by the specifications, Wozoyo has made some big claims. The PA6 boasts a CADR of 700 m³/h and is rated to cover spaces of up to 2,915 sq. ft.

Those numbers certainly sound impressive, but specifications only tell you so much about an air purifier. I've been using the PA6 in my regular routine to see how well those claims

translate to real-world use, from its purification performance and noise levels to its app, smart controls and overall day-to-day usability.

App setup and experience

As I mentioned above, you can start using the PA6 straight out of the box without going through any complicated setup. However, if you don't want to walk over to the purifier every time you want to change the mode or fan speed, or simply turn it on or off, you can use the Wozoyo Purify app over Wi-Fi.

Setting up the app is fairly simple. Open it, tap the + button, connect the PA6 to your Wi-Fi network, and let the app search for the purifier. If automatic scanning doesn't work, you can also add the PA6 manually by following the on-screen instructions. In my case, the app failed to locate the purifier during the first two attempts, but the third attempt worked. Since then, I haven't had any issues controlling the PA6 with the app.

One issue I noticed while using the app was that its air-quality read-

ings didn't always match those shown on the purifier's display. During my testing, I noticed differences of around 10–12 points between the two readings. While this doesn't affect the purifier's operation, it can be confusing when you're checking the air quality remotely through the app, particularly if you're using the readings to track how quickly the purifier is cleaning the room. It is something Wozoyo should address through the app or sensor calibration.

The PA6 also supports voice control through Amazon Alexa and Google Assistant. Once connected, you can use voice commands to control the purifier without reaching for the controls or opening the Wozoyo Purify app. I found this particularly useful because my Alexa speaker is in the living room, while the PA6 is placed in my bedroom. I could control the purifier without having to walk into the bedroom or open the Wozoyo Purify app, which made it convenient to switch modes or turn the purifier on and off from another room. Besides the basic controls, the Wozoyo
