

- A. Strong rejection from lower Bollinger Band
- B. Entry above green candle
- C. Stoploss
- D. Exit at upper Bollinger Band

As you can see in the above illustration, the market is in an uptrend, but a quick downside move can trigger a stoploss. However, if you know this strategy, you know that such impulsive moves cannot change the primary trend. The chart clearly indicates that the price continued to move upwards after touching the lower Bollinger Band.
