SCALP TRADING WITH RSI AND VWAP

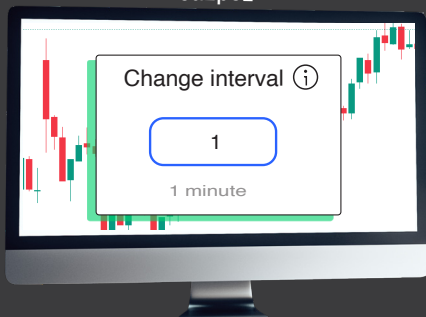

Strategy video

During the earlier time, floor traders used to buy and sell shares frequently within a few seconds or minutes. This practice was adopted to profit from small price changes in the stock prices. With the advancement of technology, this practice is now done via computers.

The shares are bought and sold quickly for a few points multiple times in a trading session. Scalp traders carry a different mindset from regular traders, they look for quick trends to ride the markets.

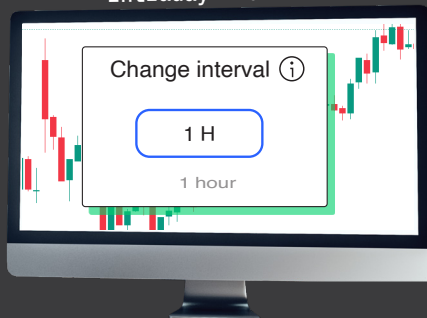

Scalper

Their preferred timeframe for scalping ranges from 1 minute to 3 minutes.

Intraday Trader

On the other hand, intraday traders or swing traders prefer a timeframe above 5 minutes- it can be 5 minutes or 1 hour depending upon their trading style.
