

4. ANALYZING RESULTS AND ENHANCEMENTS:

The success of this swing buying approach may be assessed over a 4.5-year time frame by reviewing the outcomes.

According to the numbers provided, the company records a net profit of around 2,200 points, leading to an annual return on investment (ROI) of about 48%, or about 5,000 points. However, the volatility of the market and other factors should be considered before using this method.

Avoiding transactions once the Volatility Index (VIX) is over a certain level, say 40, is recommended to further improve the approach. The research shows that potential losses might be reduced by avoiding trading during times of extreme volatility.
