

TO SELL USING THIS STRATEGY, TAKE THE FOLLOWING STEPS:

Set the chart to the 5-minute timeframe.

Apply the 200-day Moving Average to the chart.

If the price is in the downtrend, draw the Fibonacci from swing high to swing low.

Price below the Moving Average has the possibility to correct till any of the Fibonacci levels.

At any level, if you notice the price is facing resistance and forming a bearish candle, place your **SELL** order at the high of the closing candle.

Place **STOPLOSS** at the upper Fibonacci level.

TARGET at 0% Fibonacci level or a minimum of 1:2 Risk to Reward ratio.

As you can see in the illustration, the price was below the falling 200-day Moving Average and making lower highs. This is a trend confirmation which takes us to see the swing highs and swing lows of the Fibonacci Retracement tool.

At the 50% Fibonacci level, the price faced resistance and formed a Bearish Engulfing candle. This now triggers the sell order for a trader. Once the entry is taken at the low of the Bearish Engulfing candle, the stoploss can be put at the upper Fibonacci level and target can be at 0% Fibonacci level or at a minimum Risk to Reward ratio of 1:2.
